

RoundRail Linear Guides and Components

Linear Ball Bushing® Bearings, 60 Case® Shafting and RoundRail Linear Guides

Linear Motion. Optimized.[™]

Thomson - the Choice for Optimized Motion Solution

Often the ideal design solution is not about finding the fastest, sturdiest, most accurate or even the least expensive option. Rather, the ideal solution is the optimal balance of performance, life and cost.

Quickly Configure the Optimal Mechanical Motion Solution

Thomson has several advantages that makes us the supplier of choice for motion control technology.

- Thomson owns the broadest standard product offering of mechanical motion technologies in the industry.
- Modified versions of standard product or white sheet design solutions are routine for us.
- Choose Thomson and gain access to over 70 years of global application experience in industries including packaging, factory automation, material handling, medical, clean energy, printing, automotive, machine tool, aerospace and defense.
- As part of Altra Industrial Motion, we are financially strong and unique in our ability to bring together control, drive, motor, power transmission and precision linear motion technologies.

A Name You Can Trust

A wealth of product and application information as well as 3D models, software tools, our distributor locator and global contact information is available at www.thomsonlinear.com/contact_us. Talk to us early in the design process to see how Thomson can help identify the optimal balance of performance, life and cost for your next application. And, call us or any of our 2000+ distribution partners around the world for fast delivery of replacement parts.

Ball Bushing Bearings

Bushing Bearings offer high operating temperature capabilities, RoundWay® bearings are capable of load capacities up to 24,000 lb_f, with travel speeds up to 100 ft./sec. These bearings offer high performance in highly contaminated environments.

Metric Super Ball Bushing Bearings offer high performance from superior design. A coefficient of friction as low as 0.001. This allows the use of smaller, less expensive motors, belts, gears and ball screws, when replacing high-friction, plain bearings. A self-aligning capability up to 0.5° compensates for inaccuracies in base flatness or carriage machining. Achieved with Thomson Super Bearing plates, which have defined radius crowns for maximized self-alignment accuracy. Accelerations as high as 150 m/s² and steady state travel speeds up to 3 m/s without the derating factors commonly required with linear guides. Quick-to-ship, drop-in replacement parts for existing applications.

Stainless Steel MultiTrac and A Ball Bushing Bearings are ideal for harsh environments. Stainless steel (440) components resist rust and corrosion. A Bearings withstand up to 600°F (315°C). MultiTrac Ball Bushing Bearings are rated at a maximum of 180°F (82°C). MultiTrac has wear-resistant, engineered-polymer retainers to reduce inertia and noise levels. Quick-to-ship, drop-in replacement parts for existing applications.

FluoroNyliner® and Polymer Bushing Bearings

FluoroNyliner® Bushing Bearings are recommended for washdown and contaminated environments. These bearings and pillow blocks offer load capacities up to 14,000 lb_f. Polymer Bushing Bearings, which handle loads up to 2000 lb_f, are ideal for machines in which moment load is non-critical or contamination is a concern.

Polymer bushing bearings offer linear motion designers a reliable, yet economical, option for machines in which alignment and moment load are non-critical or those that require shafting that is incompatible with traditional ball bushings. Polymer bushings are a corrosion-resistant option for low-load, low-speed applications.

Shafting

While shafts may appear the same, there are significant performance differences due to the manufacturer's selected standards, and the manufacturing processes used to achieve them. The linear inner race demands the highest levels of material cleanliness, surface topography, surface hardening, diameter, taper and roundness, surface finish and straightness to provide optimum performance, minimal maintenance and long life. Unlike common shafting, Thomson 60 Case® LinearRace® shafting is manufactured to the highest quality standards. Our techniques are continuously upgraded with proprietary know-how gained from more than 70 years of linear bearing design and manufacturing. Using 60 Case LinearRace shafting with Thomson Ball Bushing Bearings ensures optimal bearing performance and travel life.

RoundRail Linear Guides

Pre-assembled, ready-to-install stages providing low friction, smooth, accurate motion for a wide range of moment or normal loading configurations. Market applications include factory automation, medical, packaging, machine tool, semiconductor, printing, automotive assembly, aerospace and food processing. Slide tables are available as customizable RoundRail linear guides to multi-axis, turnkey systems complete with motors, drives, controls and electromechanical accessories.

- Applications typically on factory machinery where accurate, smooth linear positioning is required
- Available with servo/stepper motor and drive packages
- Max thrust to 3,100 lb.
- Strokes to 120"
- Loads from 5 - 2,000 lb.
- Repeatability to 0.0002"

Thomson 60 Case shafting is sold as cut-to-length (CTL), random length (RL), special machined (SM) and quick shaft (QS).

Since Thomson grinds and hardens all of its own shafting, diameters and tolerances not listed are available as special grind and are made to order. Minimum lots may apply.

Tolerance Classes:

- L - For use with XA, Open and Adjustable Ball Bushing® Bearings and Pillow Blocks as well as Super Ball Bushing Bearings and Super Smart Ball Bushing Bearings
- S - For use with A Type Ball Bushings
- N - For use with Needle Roller Bearings
- D - For use with Thomson Die Set Ball Bushing Bearings
- G - Ball Grooved for use with Thomson Super Ball Bushing
- XL - For use with XR Bearing (Carbon Steel)
- AL - Aluminum shafting for use with FluoroNyliner® Bearings

Optional Features:

- PD - Predrilled
- CPPE - Chrome-Plated Plain Ends (carbon steel only)
- DC - Deep Case (carbon steel only - random length)
- Tx - Metric Predrilled

RoundRail linear guides are the non-driven building blocks for linear slide tables. They offer the customer flexibility to fit specific envelopes by allowing customized separations between shafts and between bearings on shafts to produce higher moment capacity. When combined with ballscrew assemblies, they become a driven slide table.

Because RoundRail linear guides are offered in a wide range of sizes, bearing types and mounting configurations, they are typically selected by the qualitative attributes that are most appropriate for a given application (i.e. environmental considerations, mounting footprint). For this reason, we are providing the following selection chart and selection criteria for consideration:

Systems Quick Reference Guide

Application Criteria	End Support	Continuous Support	FluoroNyliner	Side Mounted	Dual Shaft Rail	Twin Shaft Web

- Automotive Assembly Equipment
- Semiconductor Equipment
- Medical Equipment
- Food Processing Equipment

Round or Square?

Let Thomson help you choose the right rail type and carriage.

Since the introduction of the square, or profile rail, linear guide in the 1970s, the design engineer has been faced with the pivotal question: **round or square?**

While square rails initially cost many times more than round technology due to the extensive grinding requirements inherent in the design, new manufacturing techniques and economies of scale have allowed square rails to compete effectively in a broader application space. Once subjugated to the realm of machine tools, profile rails can now be found in many of the same applications that were once only supported by round rail. However, ball bushing guides remain popular due to some intrinsically unique and often advantageous characteristics that lend themselves to specific applications.

In order to apply the correct type of linear guide in a particular application, the design engineer must consider the advantages and capabilities of each. The cost of selecting the wrong technology can result in a lot of additional design complexity, poor function and cost in the overall assembly. As a first cut, it is useful to have a general understanding of the strengths and weaknesses of each type of product.

The table below outlines typical performance characteristics of round and profile rails and where one is superior.

Attribute	Round	Square
Performance		
Load Capacity	medium	high
Accuracy	medium	medium - high
Stiffness	medium	high
Available preload	yes (light)	yes (light - heavy)
Single guide supports moments	no	yes
Same load capacity in all directions	no	available (typical)
Seal effectiveness	high	medium
Smoothness	high	medium - high
Drag	low	medium - high
Total Cost of Ownership		
Ease of installation	high	medium
Required precision of mating component	low	high
Self aligning	yes	no
Life Expectancy	medium	high
Material Cost	low	medium
Design Flexibility		
Ability to span gaps	yes	no
Can be used as structural frame member	yes	no
Ability to use as single rail & guide	no	yes¹
Compactness (load capacity to size)	medium	high
Ease of modification/Interchangeability	high	low
Rail Mounting		
Available end support mounting	yes (preferred)	no
Available continuous support mounting	yes	yes (preferred)
Available mounting from top of rail	yes	yes (preferred)
Available mounting from bottom of rail	yes	yes

1. Depending on the application. Most square rail applications use dual rails.

This catalog includes detailed ordering information for RoundRail linear guides. Refer to the separate Thomson profile rail catalog for detailed square rail linear guides information.

RoundRail Bearings

	Description	Product Overview	Comments
Plain Contact - FluroNyliner 	Provides self-lubricating, low friction, smooth motion for high load conditions.	<ul style="list-style-type: none"> PTFE tape is bonded to the ID of an aluminum housing. Suitable for wash-down & food applications. Can withstand high vibration & shock loads. Extremely smooth running; does not require an overly smooth surface to run on. Compensated Sizes $\frac{1}{4}$" – 2", closed, open, adjustable 	
Plain Contact - Polymer 	Offer reliable and economical, linear motion for machines in which moment load is non-critical or where contamination is a concern.	<ul style="list-style-type: none"> Available in sizes of 6 to 50 mm (closed) and 10 to 50 mm (open) Maintenance-free operation Polymer liners reduce noise Dirt and dust resistant Anodized aluminum adapter Operate in temperatures ranging from - 50°C to 90°C (- 58°F to 194°F) 	
Steel Sleeve (A) 	The steel sleeve anti-friction recirculating ball bushing provides rigid low drag movement – ~100x lower drag coefficient than a plain contact bearing.	<ul style="list-style-type: none"> A Bearings – all steel (operates up to 450°F/232°C) with 3 grades of precision available (A, XA, B); sizes $\frac{1}{4}$" – 4", closed, open, adjustable. MAM (MultiTrac® A Metric) – twin track configuration, sleeve and a Delrin retainer; size 8 – 40 mm, closed open, adjustable. INST BRGS – precision miniature stainless steel (corrosion resistant) - sizes: 1/8" – 1/4". Die Sets – designed specifically for die movement applications; size: 1" – 2". 	<ul style="list-style-type: none"> The patented MAM is the smoothest and highest load capacity A-type bearing in the market. Corrosion-resistant versions available.
Super 	The self-aligning 52100 bearing plate has a ball conforming groove that, with the Delrin sleeve and retainer provide high load capacity smooth motion.	<ul style="list-style-type: none"> The ball conforming groove enables the Super bearing to provide 3x the load capacity or 27X the L10 travel life of a conventional steel ball bushing bearing . Sizes $\frac{1}{4}$" – 2", 5 – 50mm, open/closed Ball Groove, Cartridge, Out-Rigger, Segment Bearings, XRs 	<ul style="list-style-type: none"> Additional seal option on outside of bearing and on the pillow blocks offers sealing preferred over competitors by our customers. Thomson has the largest installed base in North America. Competitors have modeled their products after Thomson.
Super Smart 	<p>Truly self-aligning twin track linear bearing.</p> <p>The 52100 Steel plate pitches, rocks and rolls on a precision hardened steel band to provide universal type alignment capability.</p>	<ul style="list-style-type: none"> 3 industry standards Imperial Sizes $\frac{1}{2}$" – 1 1/2 " ISO Metric 16 – 40mm JIS Metric 16 – 40mm SS6U, E, J's available 16 – 40mm Closed and Open 	<ul style="list-style-type: none"> This patented product provides smooth, quiet, low drag linear movement at 6x the load capacity or 216 x the L10 travel life of a conventional steel linear ball bushing bearing. Also available in a low cost 6 track version. Its unique design with the steel band enables the bearing to preserve its ID fit-up and self-aligning capability over extended use.

	Description	Product Overview	Comments
Specialty Bearings 	There are a multitude of specialty bearings that can be configured or developed to suit almost any customers' needs.	<ul style="list-style-type: none"> RoundWay® - all-steel construction and a chain that connects the rolling elements; Sizes $\frac{1}{2}$" – 4". NB (nylon ball) Bearings, Cartridge Bearings, etc. 	<ul style="list-style-type: none"> Highest load rating of the linear bearings. The ratings are based on a longer travel than other linear bearings use. The chain enables the bearing to withstand high speeds and accelerations. Temperatures up to 450°F/232°C. Suitable for extremely harsh environments.
Accessories/Options 	The host of accessories and options associated with RoundRail bearings are multitudinous.	<ul style="list-style-type: none"> Steel Pillow Blocks, Aluminum Pillow Blocks, Singles, Twins, Closed, Opens, Adjustable, Flanged Pillow Blocks, Self-Aligning PBs, XPBs, XPBOs, CRs, wipers, seals, DDs, stainless steel options, resilient mounts, Lube Fittings, etc. 	<ul style="list-style-type: none"> Largest variety in the industry of customized offerings, accessories, and options that allow for new and broader uses of bearings in unusual, harsh, and state-of-the-art applications.

60 Case® Shafting

	Description	Product Overview	Comments
	60 Case Shafting	AISI 1566 <ul style="list-style-type: none"> Sizes: 3/16" – 4" and 3 – 80mm Bolt down from the top Smart Rail	<i>(applies to 60 Case Shafting, 440C & 300 Stainless Steel Shafting, 60 Case Tubular Shafting and their Accessories/Options)</i> <ul style="list-style-type: none"> High grade steel used for standard product – 1566 vs. competitor's 1060. Coil-to-bar mfg. technology permits sourcing of hot rolled material, lower costs, sourcing flexibility, high straightness levels, and controlled sizing prior to induction hardening. Low stress precision grinding techniques to produce: - Dia. tolerance control (<0.0002") - classes D & N) <ul style="list-style-type: none"> - Roundness variation (<0.000080") - Taper var. on 17' L or $\frac{1}{2}$" dia. tolerance (<0.0002") - Surface finish (< 8 Ra) defect free surface - Straightness (capability to < 0.0005" / foot) Value added machining capabilities of hard turning, radial drill and tapping, milling; journal machining to 0.0002" max. dia. variation and <0.001" concentricity variation.

Thomson Linear Motion Components

The RoundRail Advantage...

Super Smart Ball Bushing® Bearings

Thomson Super Smart Ball Bushing Bearings represent a major advancement for linear bearing technology worldwide.

This patented, self-aligning linear bearing provides twice the load carrying capacity or eight times the travel life of the industry standard Thomson Super Ball Bushing Bearing. This dramatic increase in load capacity allows the use of less expensive drive motors, linkages, gears and ball screws. The unique Super Smart design allows the bearing to maintain its diametrical fit up when installed in housings that are soft or slightly out-of-round. Super Smart Bearings utilize the RoundRail Advantage that eliminates the need for derating factors commonly used with linear guides. The bearings are called "Smart" because their universally self-aligning, double-track design incorporates engineering concepts that literally render old style conventional bearings obsolete. See Page 21.

Super Smart Ball Bushing Pillow Blocks

Thomson Super Smart Ball Bushing Pillow Blocks available in closed, adjustable and open styles in both single and twin versions.

To minimize installation time and cost, the Super Smart Ball Bushing Bearing can be ordered factory installed in an industry standard single or twin pillow block. The closed-type pillow block is used in end-supported applications for spanning or bridging a gap. The open style is used in continuously supported applications when maximum rigidity and stiffness is required. Each Super Smart pillow block is complete with integral double-acting seals that keep out contaminants, retain lubrication and maximize bearing life. Since each pillow block is dimensionally interchangeable with the industry standard Thomson Super Ball Bushing pillow block, system performance improvements can be realized immediately. See Page 28.

Super Ball Bushing Bearings

Industry standard, self-aligning Super Ball Bushing Bearings available in 23 sizes and configurations.

Super Ball Bushing Bearings offer three times the load capacity or 27 times the life of conventional linear bearings. Industry standard, self-aligning Super Ball Bushing Bearings ease installation and minimize wear from minor bore misalignment. Super Ball Bushing Bearings can achieve speeds up to 10 ft./s and accelerations up to 450 ft./s² without the derating factors commonly found in linear guide products. With a coefficient of friction as low as .001, Super Ball Bushing Bearings provide a quick, easy replacement for high-friction plain bearings. The wear-resistant, engineered-polymer retainers and outer sleeves reduce inertia and noise in critical, high-speed applications. See Page 44.

...The RoundRail Advantage - The inherent ability of a RoundRail Ball Bushing Bearing system to accommodate torsional misalignment (caused by inaccuracies in carriage or base machining or by machine deflection) with little increase in stress to the bearing components.

Super Ball Bushing Bearing Pillow Blocks

Available in closed, adjustable and open styles in both single and twin versions.

Thomson Super Ball Bushing Bearings are also available factory installed in single or twin pillow blocks. Super Ball Bushing Bearing pillow blocks are provided with integral, double-acting seals that keep out contaminants and retain lubrication, maximizing system performance and life. Twin versions provide up to twice the load capacity or eight times the life of single versions, allowing the use of smaller and less expensive drives, motors and ball screws. When replacing v-ways and flat-ways, the Super pillow block's low coefficient of friction reduces power consumption and provides important design economies. See Page 53.

Precision Steel Ball Bushing Bearing Products

Rigid, Precision Steel Ball Bushing Bearing design eliminates binding and chatter found in high friction plain bearings.

Precision Steel Ball Bushing Bearings are available in an open version for continuously supported applications and a closed version for end-supported applications. Extra precision and adjustable versions are available for end supported applications requiring higher precision and repeatability. Precision Steel Ball Bushing Bearing products are also available factory installed in a self-aligning, malleable iron pillow block, minimizing installation time and cost. The all-steel design makes the Precision Steel Ball Bushing Bearing product line perfect for replacing plain bearings in high-temperature applications. Now available in 440 stainless steel, ideal for harsh and high temperature environments. See Page 69.

Miniature Instrument Ball Bushing Bearings

High Accuracy and Compactness for Instrumentation Level Applications.

The accuracy level and compact size make the Instrument Ball Bushing Bearing ideal for small mechanisms or devices that require high repeatability and responsiveness. When replacing high-friction, plain bearings, the Instrument Ball Bushing Bearings' constant low coefficient of friction eliminates stick-slip and provides smooth linear performance. Each Instrument Ball Bushing Bearing can be provided with a matched 60 Case® LinearRace® shafting for minimum fit-up, optimizing system performance and accuracy. See Page 80.

Thomson Linear Motion Components

The RoundRail Advantage...

Die Set Ball Bushing® Bearings

Available in two accuracy classes and suitable for a variety of industrial applications.

Thomson Die Set Ball Bushing Bearings are designed to fit the mounting holes of the punch holder in standard dies. When replacing high-friction, plain bearings in standard dies, the result is less machine downtime and increased efficiency. With steady state speeds up to 10 ft./s, the Die Set bearing will provide faster cycle times with improvements in production rates realized immediately. Matched precision ground 60 Case® LinearRace® allows for a close fit-up between the shaft and the LinearRace shafting and bearing, providing critical die alignment. When normal machine service requires bearing replacement, the Die Set bearing can be removed by simply unbolting the toe clamps. See Page 82.

XR Ball Bushing Bearing Products

High load capacity and rigidity combined with the RoundRail Advantage.

The XR Ball Bushing Bearing provides five times the load capacity or 125 times the life of conventional linear bearings. This increase in bearing performance significantly reduces downtime and maintenance, while increasing machine reliability. When replacing v-ways and flat-ways, XR Ball Bushing Bearings allow travel speeds up to 5 ft./s and accelerations up to 225 ft./s² without a sharp increase in power consumption. XR Ball Bushing Bearings also provide three times the rigidity of conventional Ball Bushing Bearings, reducing deflection in critical machining applications. Pillow blocks are available with factory installed XR Ball Bushing Bearings and integral seals. 60 Case LinearRace shafting available pre-mounted on standard extra rigid LinearRace support rails. See Page 90.

RoundWay® Linear Roller Bearings

Low-friction roller bearings with up to 20 times the load capacity of conventional linear bearings.

These patented, self-aligning linear roller bearings have more than 20 times the load capacity of a conventional linear ball bearing. This dramatic increase in bearing load capacity allows designers to optimize system compactness and minimize hardware costs. Combining the self-aligning feature with the RoundRail Advantage minimizes installation time and assures trouble-free operation. RoundWay bearings can achieve operating speeds up to 10 ft./s without the derating factors commonly seen with linear guides. When normal machine maintenance is required, RoundWay bearings can be quickly and cost-effectively replaced, without scrapping the entire system – a major problem when servicing some linear guides. See Page 97.

Thomson Linear Motion Components

The RoundRail Advantage...

FluoroNyliner® Bushing Bearings

Thomson FluoroNyliner Bushing Bearings offer:

- High performance in contaminated, washdown or submerged environments.
- Proprietary, self-lubricating, composite bearing liner TEP 950.
- Low friction, ideally suited for linear and rotary motion.
- Precision-machined aluminum sleeve.
- Excellent performance in high-vibration and mechanical shock applications.
- Corrosion resistance.
- Product availability in industry standard sizes from 0.25" to 2.00".
- Eight bearing configurations, including closed, open, self-aligning, precision and compensated IDs.
- Load capacities up to 14,000 lb_f.
- Integral seals.
- Closed, open, and flanged pillow blocks available in single or twin versions.

Polymer Bushing Bearings

Thomson polymer bushing bearings offer linear motion designers a reliable, yet economical, option for machines in which moment load is non-critical or where contamination is a concern. These bearings are also useful for applications that require shafting that is incompatible with Thomson Ball Bushing® Bearings such as aluminum or 316 stainless steel.

Handling loads up to 9000 N (2023 lbf), polymer bushing bearings provide a corrosion-resistant option for low-load, low-speed applications. When combined with round rail shafting, pillow blocks or other assembly components, polymer bushing bearings deliver a budget-friendly linear motion solution to a number of applications.

Polymer Bushing Bearings Applications

- Factory Automation
- Robotics
- Health and Fitness
- Medical Automation
- Woodworking
- Packaging
- Food and Beverage
- Vending

Polymer Bushing Bearings Highlights

- Available in sizes of 6 to 50 mm (closed) and 10 to 50 mm (open)
- Maintenance-free operation
- Polymer liners reduce noise
- Dirt and dust resistant
- Anodized aluminum adapter
- Available with aluminum pillow blocks

Self-Lubricating Linear Bearing Pillow Blocks

Thomson Lube for Life pillow blocks provide continuous bearing lubrication and enhanced protection for a broad range of applications. Self-lubricating cartridges are pressed into each end of the pillow block housing, and the linear bearing is lubricated initially with EP2 grease. The Lube for Life polymer is under constant pressure against the 60 Case® shafting, ensuring a film of lubricant between the ball bearings and the inner race.

Features and Benefits

- Maintenance-free operation
- Eliminates need for expensive lubrication systems
- Available as an option for Thomson pillow block types:
 - Super and Super Smart Ball Bushing® Bearing
 - Open and closed
 - Single and twin
- Available as a retrofit kit for existing non self-lubricating pillow block assemblies

Closed Self-Lubricating Pillow Block Assemblies

(Dimensions in inches)

Nominal Linear Race Diameter	L1	L2 Single	L2 Twin
0.500	0.23	2.15	3.96
0.750	0.24	2.55	4.98
1.000	0.30	3.42	6.60
1.250	0.42	4.47	8.34
1.500	0.43	4.86	9.86

Open Self-Lubricating Pillow Block Assemblies

(Dimensions in inches)

Nominal Linear Race Diameter	L1	L2 Single	L2 Twin
0.500	0.31	2.11	4.12
0.750	0.30	2.49	5.10
1.000	0.30	3.24	6.60
1.250	0.42	4.21	8.34
1.500	0.43	4.60	9.86

Super Smart Ball Bushing Bearing Products

Inch Ball Bushing Bearings

Thomson Super Smart Ball Bushing Bearing products offer:

- Up to six times the load capacity or 216 times the travel life of conventional linear bearings.
- Twice the load capacity or eight times the travel life of industry standard Thomson Super Ball Bushing Bearings.
- A precision, super finished, dual track bearing plate for optimum system smoothness and performance.
- A universal self-alignment feature that compensates for misalignment of housing bores and 60 Case® LinearRace® shaft deflection, optimizes load distribution between ball tracks and assures uniform ball loading over the entire length of the bearing plate. Installation time and cost is minimized while bearing performance and life is maximized.
- A technologically advanced design that allows the bearing to maintain its diametrical fit-up when installed in a housing that is slightly out-of-round.
- Longer travel life and minimal machine downtime when replacing conventional linear bearings or the industry standard Super Ball Bushing Bearing.
- The RoundRail Advantage combined with universal self-alignment, eliminating the need for derating factors commonly required when using linear guides.
- A coefficient of friction as low as .001. This allows the use of smaller, less expensive motors, belts, gears and ball screws when replacing high-friction, plain bearings.
- Closed and open configurations.
- Double-lip integral wipers that keep out dirt while retaining lubrication. Travel life is maximized.
- Steady state travel speeds up to 10 ft./s and accelerations to 450 ft./s without the use of derating factors.

Super Smart Ball Bushing® Bearings represent a major advancement in linear bearing technology worldwide. These offer twice the load capacity or eight times the travel life of the industry standard Thomson Super Ball Bushing bearing. An enormous technological breakthrough, considering the Super Ball Bushing bearing already offers three times the load capacity or 27 times the travel life of conventional linear bearings.

Technologically Advanced Design

The load carrying component of the Super Smart Ball Bushing Bearing is the combination of four hardened bearing quality steel components (Figures 1 & 2).

The first component is the steel outer ring, which allows the bearing to maintain its diametrical fit-up even when installed in a housing that is slightly out-of-round. The unique ring design also allows for bearing adjustment and the removal of diametrical clearance. The second component is the precision, super-finished, double-track bearing plate that provides twice the load capacity and features universal self alignment.

The third component is the rolling element. Each Super Smart Ball Bushing Bearing utilizes precision ground balls manufactured to the highest quality standards for roundness and sphericity. The result is maximum load capacity, travel life and performance.

The last component is the 60 Case® LinearRace® shaft that acts as the inner race to the Super Smart Ball Bushing Bearing. Each 60 Case LinearRace shaft is manufactured to the highest quality standards for roundness, straightness, surface finish and hardness. Roundness is held under 80 millionths of an inch; straightness to .001 inches per foot; surface finish under 8 microinch and hardness of 60 HRC minimum. The combination of inner and outer race or 60 Case LinearRace shaft and Super Smart Ball Bushing Bearing provides the basis for the RoundRail Advantage.

The RoundRail Advantage

The RoundRail Advantage is the inherent ability of a Super Smart Ball Bushing Bearing system to accommodate torsional misalignment (caused by inaccuracies in carriage or base machining or by machine deflection) with little increase in stress to bearing components. Installation time and cost are minimized and system performance is maximized.

Figure 3

Universal Self-Alignment

The bearing plate of the Super Smart Ball Bushing Bearing is designed with many unique and technologically advanced features. The universal self-alignment feature assures that the Super Smart Ball Bushing Bearing will achieve maximum performance regarding load capacity, travel life, smooth operation and coefficient of friction. The three components that make up universal self-alignment are **Rock**, **Roll** and **Yaw**.

Rock

The bearing plate is designed to rock 0.5° about the hardened precision ground outer ring (Figures 3 & 4). This self-aligning feature allows the Super Smart Ball Bushing Bearing to absorb misalignment caused by inaccuracies in housing bore alignment or 60 Case LinearRace shaft deflection. This rocking capability provides smooth entry and exit of the precision balls into and out of the load zone, assuring a constant low coefficient of friction. By compensating for misalignment, each bearing ball in the load carrying area is uniformly loaded providing maximum load capacity.

Figure 4

Closeup of hardened precision ring, showing how the bearing plate self aligns (rocks) about the curved surface of the ring.

Roll

The second key design feature of the Super Smart Ball Bushing Bearing plate is its ability to **Roll**. The bearing plate is designed with the radius of its outer surface smaller than the inside radius of the precision outer ring (Figure 5). This allows the bearing plate to compensate for torsional misalignment and evenly distribute the load on each of its two ball tracks. The roll component assures maximum load capacity and travel life.

Figure 5

Closeup of double track bearing plates showing how they self align (roll) to evenly distribute the load on each of their two ball tracks.

Yaw

The shape formed by the **Rock** and **Roll** features allows the Super Smart Ball Bushing Bearing plate to rotate about its center (Figure 6). This allows the Super Smart Ball Bushing Bearing to absorb skew caused by misalignment. The result is a constant low coefficient of friction and maximum bearing performance.

Figure 6

Bearing plates rotate about their center to prevent skewing relative to the 60 Case LinearRace shaft.

The Super Smart Advantage

Advantage: Load Capacity

The Super Smart Ball Bushing® Bearing provides twice the load capacity of the industry standard Thomson Super Ball Bushing Bearing and six times the load capacity of conventional linear bearings.

Advantage: Travel Life

The Super Smart Ball Bushing Bearing provides eight times the travel life of the industry standard Thomson Super Ball Bushing bearing and 216 times the travel life of conventional linear bearings.

‡ P = Preload, C = Clearance

(1) The Dynamic Load Capacity is based on a rated travel life of 2 million inches. The actual Dynamic Load Capacity can be affected by the orientation of the bearing or the direction of the applied load. For Dynamic Load Correction Factors, see following polar graphs.

(2) For part number description and specifications, see page 25. For specifications on seals and retaining rings, see the Accessories section.

Note: For additional technical information, see the Engineering section beginning on page 252.

Load/Life Graph

(Lines indicate limiting load for given Ball Bushing Bearing)

Determining Ball Bushing Bearing Size

To determine the proper Ball Bushing Bearing size, enter the chart with the maximum load of the most heavily loaded bearing and the required travel life. Mark where the two lines intersect. All Ball Bushing Bearing sizes that pass through or above and to the right of this point may be suitable for this application.

Note: For the purpose of using this chart, load on most heavily loaded bearing = maximum applied load/ K_0 . Where K_0 can be determined from the Polar Graph to the right.

Polar Graphs

The actual dynamic load capacity of a Ball Bushing Bearing is determined by the orientation of the bearing or direction of the applied load. The load correction factor K_0 is found by knowing the direction of the applied load relative to the orientation of the bearings ball tracks and referring to the polar graph. To determine the actual dynamic load capacity, multiply the proper correction factor by the dynamic load capacity listed in the product table on the previous page.

(1) The Dynamic Load Capacity is based on a rated travel life of 2 million inches. The actual Dynamic Load Capacity can be affected by the orientation of the bearing or the direction of the applied load. For Dynamic Load Correction Factors, see following polar graphs. Dynamic load capacity is based on two bearings equally loaded.

(2) For part number description and specifications, see page 25.

Note: For additional technical information, see the Engineering section beginning on page 252.

Load/Life Graph

(Lines indicate limiting load for given Ball Bushing Bearing)

Determining Ball Bushing Bearing Size

To determine the proper Ball Bushing Bearing size, enter the chart with the maximum load of the most heavily loaded bearing and the required travel life. Mark where the two lines intersect. All Ball Bushing Bearing sizes that pass through or above and to the right of this point may be suitable for this application.

Note: For the purpose of using this chart, load on most heavily loaded bearing = maximum applied load/ K_0 . Where K_0 can be determined from the Polar Graph to the right.

Polar Graphs

The actual dynamic load capacity of a Ball Bushing Bearing is determined by the orientation of the bearing or direction of the applied load. The load correction factor K_0 is found by knowing the direction of the applied load relative to the orientation of the bearings ball tracks and referring to the polar graph. To determine the actual dynamic load capacity, multiply the proper correction factor by the dynamic load capacity listed in the product table on the previous page.

‡ P = Preload, C = Clearance

(1) For part number description and specifications, see page 34.

(2) The Dynamic Load Capacity is based on a rated travel life of 2 million inches. The actual Dynamic Load Capacity can be affected by the orientation of the bearing or the direction of the applied load. For Dynamic Load Correction Factors, see following polar graphs.

Load/Life Graph

(Lines indicate limiting load for given Ball Bushing® Bearing)

Determining Ball Bushing Bearing Size

To determine the proper Ball Bushing Bearing size, enter the chart with the maximum load of the most heavily loaded bearing and the required travel life. Mark where the two lines intersect. All Ball Bushing Bearing sizes that pass through or above and to the right of this point may be suitable for this application.

Note: For the purpose of using this chart, load on most heavily loaded bearing = maximum applied load/ K_0 . Where K_0 can be determined from the Polar Graph to the right.

When using LSRA smart rail assemblies, the dynamic load capacity for side-loaded or pull-off applications must be derated by 75% or .25 times the dynamic load capacity.

Polar Graphs

The actual dynamic load capacity of a Ball Bushing Bearing is determined by the orientation of the bearing or direction of the applied load. The load correction factor K_0 is found by knowing the direction of the applied load relative to the orientation of the bearings ball tracks and referring to the polar graph. To determine the actual dynamic load capacity, multiply the proper correction factor by the dynamic load capacity listed in the product table on the previous page.

Note: For Super Smart Ball Bushing® Bearings and other extremely high-load bearings, the bearing load capacity as indicated by the polar charts may be practically limited by the degree of shaft flexure acceptable or the capacity of the shaft rail assembly fasteners. In such cases, the loads should be kept below these practical limits, however, the full corresponding life capacity benefits are still realized.

Super Smart Ball Bushing Rigid Steel Pillow Blocks provide:

- Faster settling time...Greater Productivity
- Less deflection...Greater Accuracy
- Highest Load Capacity...Smallest Envelope
- Longest Bearing Life...Greater Reliability

Polar Graphs

The actual dynamic load capacity of a Ball Bushing® Bearing is determined by the orientation of the bearing or direction of the applied load. The load correction factor K_0 is found by knowing the direction of the applied load relative to the orientation of the bearings ball tracks and referring to the polar graph. To determine the actual dynamic load capacity, multiply the proper correction factor by the dynamic load capacity listed in the product table on the previous page.

Note: For Super Smart Ball Bushing Bearings and other extremely high load bearings, the bearing load capacity as indicated by the polar charts may be practically limited by the degree of shaft flexure acceptable, or the capacity of the shaft rail assembly fasteners. In such cases, the loads should be kept below these practical limits, however, the full corresponding life capacity benefits are still realized.

Pick and Place X-Y System

Objective

Build an X-Y System that transfers the work piece between two separate machining stations.

Solution

Assemble the X-Y System utilizing Super Smart pillow blocks on end-supported 60 Case® LinearRace® for the X-axis and continuously supported 60 Case LinearRace on the Y-axis. Utilize Thomson ball screw assemblies for high-speed positioning.

Products Specified

X-axis

- 2 - 1 1/2 L CTL x 48.00 in (60 Case LinearRace)
- 4 - SB24 (60 Case LinearRace End Support Blocks)
- 4 - SSUPB24 (Super Smart Ball Bushing Pillow Blocks)
- 1 - 1 1/4 x .200 (Thomson Ball Screw Assembly)

Benefits

The 60 Case LinearRace and 60 Case LinearRace end support blocks provide an important bridge between machining stations. The Super Smart Ball Bushing pillow blocks and Thomson ball screws provide uninterrupted high-speed movement of the work piece. Productivity increases by 200%.

Super Ball Bushing® Bearing Products

Thomson Super Ball Bushing Bearing products offer:

- A self-aligning capability up to .5° compensating for inaccuracies in base flatness or carriage machining.
- The RoundRail Advantage combined with the self-aligning feature, eliminating the need for derating factors commonly required for linear guides.
- Travel speeds up to 10 ft./s without a reduction in load capacity.
- Lightweight, wear-resistant, engineered-polymer retainers and outer sleeves that reduce inertia and noise.
- Radially floating bearing plates. When installed in an adjustable housing, the Super Ball Bushing Bearing may be adjusted to a specific diametrical fit-up for accurate and repeatable movement.
- A constant coefficient of friction as low as .001.
- The use of smaller, less expensive drive motors, belts, linkages, gears and ball screws, when replacing high-friction plain bearings.
- A closed configuration for end-supported applications and an open configuration for continuously supported applications.
- Ready-to-install pillow blocks with double-acting seals and an access for lubrication. Installation and downtime is minimized.

Figure 1

Figure 2

Figure 3

Figure 4

The Super Ball Bushing Bearing has been the industry standard for self-aligning linear bearings for more than 20 years. This bearing provides three times the load capacity or 27 times the travel life of conventional linear bearings. This dramatic improvement in bearing performance significantly reduces downtime and maintenance, while increasing machine reliability. Thomson invented the Super Ball Bushing Bearing with many unique design features. Besides the dramatic increase in load capacity, the Super Ball Bushing Bearing is self-aligning, lightweight and adjustable with a low coefficient of friction (Figure 1).

Three Times the Load Capacity

The bearing plates are hardened, bearing quality steel with ball-conforming grooves (Figure 2). The groove is slightly larger than the ball diameter, providing an optimal area for ball contact. The greater ball-to-bearing plate contact provides the increase in load capacity or travel life.

Zero Clearance Fit

The bearing plates are also designed to float radially (Figure 3). When the bearing is mounted in an adjustable housing, selected fit-ups can be achieved on the 60 Case® LinearRace® (shaft).

Self-Aligning

The Super Ball Bushing Bearing plates pivot .5° about their centers (Figure 4) to assure smooth entry and exit of the precision bearing balls. Each plate aligns itself automatically to compensate for inaccurate housing bore alignment, base flatness or carriage machining. This provides uniform ball loading, smooth ball recirculation and a constant coefficient of friction.

Smooth, Quiet Operation

The Super Ball Bushing Bearing's outer sleeve and retainer are made of wear-resistant, low-friction engineering polymer. It reduces inertia and operating noise levels significantly.

Part Number Description and Specification

Super Ball Bushing® Bearings (Closed Type) for End-Supported Applications

Super Ball Bushing Pillow Blocks (Closed Type) for End Supported Applications

Not all options are available in all sizes.

See catalog pages or contact Thomson Customer Support for combination availability.

For additional information on bearing options, see page 264.

[‡] P = Preload, C = Clearance

(1) For part number description and specifications, see page 46.

(2) The Dynamic Load Capacity is based on a rated travel life of 2 million inches. The actual Dynamic Load Capacity can be affected by the orientation of the bearing or the direction of the applied load. For Dynamic Load Correction Factors, see following polar graphs.

Note: For additional technical information, see the Engineering section beginning on page 252.

Load/Life Graph

(Lines indicate limiting load for given Ball Bushing® Bearing)

Determining Ball Bushing Bearing Size

To determine the proper Ball Bushing Bearing size, enter the chart with the maximum load of the most heavily loaded bearing and the required travel life. Mark where the two lines intersect. All Ball Bushing Bearing sizes that pass through or above and to the right of this point may be suitable for this application.

Note: For the purpose of using this chart, load on most heavily loaded bearing = maximum applied load/ K_0 . Where K_0 can be determined from the Polar Graph to the right.

Polar Graphs

The actual dynamic load capacity of a Ball Bushing Bearing is determined by the orientation of the bearing or direction of the applied load. The load correction factor K_0 is found by knowing the direction of the applied load relative to the orientation of the bearings ball tracks and referring to the polar graph. To determine the actual dynamic load capacity, multiply the proper correction factor by the dynamic load capacity listed in the product table on the previous page.

(1) For part number description and specifications, see page 46.

(2) The Dynamic Load Capacity is based on a rated travel life of 2 million inches. The actual Dynamic Load Capacity can be affected by the orientation of the bearing or the direction of the applied load. For Dynamic Load Correction Factors, see following polar graphs. Dynamic load capacity is based on two bearings equally loaded.

Note: For additional technical information, see the Engineering section beginning on page 252.

Load/Life Graph

(Lines indicate limiting load for given Ball Bushing® Pillow Block)

Determining Ball Bushing Bearing Size

To determine the proper Ball Bushing Bearing size, enter the chart with the maximum load of the most heavily loaded bearing and the required travel life. Mark where the two lines intersect. All Ball Bushing Bearing sizes that pass through or above and to the right of this point may be suitable for this application.

Note: For the purpose of using this chart, load on most heavily loaded bearing = maximum applied load/ K_0 . Where K_0 can be determined from the Polar Graph to the right.

Polar Graphs

The actual dynamic load capacity of a Ball Bushing Bearing is determined by the orientation of the bearing or direction of the applied load. The load correction factor K_0 is found by knowing the direction of the applied load relative to the orientation of the bearings ball tracks and referring to the polar graph. To determine the actual dynamic load capacity, multiply the proper correction factor by the dynamic load capacity listed in the product table on the previous page.

Note: For additional technical information, see the Engineering section beginning on page 252.

Load/Life Graph

(Lines indicate limiting load for given Ball Bushing Pillow Block)

Determining Ball Bushing Bearing Size

To determine the proper Ball Bushing Bearing size, enter the chart with the maximum load of the most heavily loaded bearing and the required travel life. Mark where the two lines intersect. All Ball Bushing Bearing sizes that pass through or above and to the right of this point may be suitable for this application.

Note: For the purpose of using this chart, load on most heavily loaded bearing = maximum applied load/ K_0 . Where K_0 can be determined from the Polar Graph to the right.

Polar Graphs

The actual dynamic load capacity of a Ball Bushing Bearing is determined by the orientation of the bearing or direction of the applied load. The load correction factor K_0 is found by knowing the direction of the applied load relative to the orientation of the bearings ball tracks and referring to the polar graph. To determine the actual dynamic load capacity, multiply the proper correction factor by the dynamic load capacity listed in the product table on the previous page.

Cam-Actuated Part Transfer Mechanism for Multiple-Transfer Press

Objective

Improve production rate and increase the service life of a transfer table mechanism.

Solution

Replace the conventional linear bearings with Adjustable Super Ball Bushing® Twin Pillow Blocks. Bearing service life increased to five years.

Products Specified

- 2 - TWN16ADJ (Super Ball Bushing Twin Pillow Blocks)
- 4 - ASB16 (60 Case® LinearRace® End Support Blocks)
- 2 - 1 L CTL x 24.00 in (60 Case LinearRace)

Benefits

The table achieved maximum cycle efficiency by reducing costly downtime and improving service life.

Precision Steel Ball Bushing Bearing Products

Inch Ball Bushing Bearings

Thomson Precision Steel Ball Bushing Bearing Products offer:

- A coefficient of friction as low as .001. When replacing high-friction plain bearings, Precision Steel Ball Bushing Bearings dramatically improve machine productivity and efficiency.
- All-steel construction for maximum system rigidity.
- Two accuracy classes allowing for immediate improvements in system positioning and repeatability.
- Availability in 14 bore sizes and nine configurations.
- The RoundRail Advantage, which minimizes installation time and cost.
- Steady state travel speeds up to 10 ft./s and accelerations to 450 ft./s² without the use of derating factors.
- An operating temperature up to 600°F / 315°C.
- Availability in a self-aligning pillow block housing for ease of installation and use.

Figure 1

When the Precision Steel Ball Bushing Bearing is installed in its standard pillow block, it will self-align up to three degrees in all directions.

Figure 2

Precision Steel Ball Bushing Bearing cross-section

The basis for the performance of all Precision Steel Ball Bushing® Bearings is a simple but ingenious system of ball recirculation that permits almost frictionless, unlimited travel.

Replace High-Friction Plain Bearings

Plain bearings cause friction, stick-slip, binding and chatter. The Precision Steel Ball Bushing Bearing's patented ball recirculation virtually eliminates wear and provides a constant coefficient of friction as low as .001. This dramatic reduction in friction allows the designer to use smaller, less expensive drive motors, ball screws, belts, linkages and gears.

Lasting Precision Alignment

High-friction plain bearings cause wear, resulting in a loss in system alignment and repeatability. Each Precision Steel Ball Bushing Bearing is manufactured with high-quality bearing steel that is hardened and precision ground. The rolling elements of each Ball Bushing Bearing are precision, ground-bearing balls that recirculate freely into and out of the load zone. The balls are guided through their recirculation path by a steel retainer and hardened sleeve. The inherent, non-wear characteristics of each Precision Steel Ball Bushing Bearing assures maximum system accuracy and repeatability.

High Travel Speeds

Precision Steel Ball Bushing Bearings can operate at travel rates as high as 10 ft./s and accelerations as high as 450 ft./s². When replacing inefficient v-way or flat-way systems, this travel rate capability provides immediate improvements in machine efficiency and productivity.

Ease of Installation

The Precision Steel Ball Bushing Bearing can be retained in a housing, internally or externally. The retaining ring groove on the outside diameter allows the bearing to be captured and retained by an external retaining ring. If internal retention is required, the Ball Bushing Bearing can be installed in a housing and held in place with an internal retaining ring.

Protection from Contamination

Precision Steel Ball Bushing Bearings' most popular sizes are available with double-acting integral wipers that keep out contamination, retain lubrication and maximize travel life.

Part Number Description and Specification

Precision Steel Ball Bushing Bearings (Closed Type) for End Supported Applications

[‡] P = Preload, C = Clearance

(1) For part number description and specifications, see page 71.

(2) The Dynamic Load Capacity is based on a rated travel life of 2 million inches. The actual Dynamic Load Capacity can be affected by the orientation of the bearing or the direction of the applied load. For Dynamic Load Correction Factors, see following polar graphs.

Load/Life Graph

(Lines indicate limiting load for given Ball Bushing Bearing)

Determining Ball Bushing Bearing Size

To determine the proper Ball Bushing Bearing size enter the chart with the maximum load of the most heavily loaded bearing and the required travel life. Mark where the two lines intersect. All Ball Bushing Bearing sizes that pass through or above and to the right of this point may be suitable for this application.

Note: For the purpose of using this chart, load on most heavily loaded bearing = maximum applied load/ K_0 . Where K_0 can be determined from the Polar Graph to the right.

Polar Graphs

The actual dynamic load capacity of a Ball Bushing Bearing is determined by the orientation of the bearing or direction of the applied load. The load correction factor K_0 is found by knowing the direction of the applied load relative to the orientation of the bearings ball tracks and referring to the polar graph. To determine the actual dynamic load capacity, multiply the proper correction factor by the dynamic load capacity listed in the product table on the previous page.

(1) For part number description and specifications see page 71.

(2) The Dynamic Load Capacity is based on a rated travel life of 2 million inches. The actual Dynamic Load Capacity can be affected by the orientation of the bearing or the direction of the applied load. For Dynamic Load Correction Factors, see following polar graphs.

Note: Check bearing clearance when using Thomson end supports.

Load/Life Graph

(Lines indicate limiting load for given Ball Bushing Bearing)

Determining Ball Bushing Bearing Size

To determine the proper Ball Bushing Bearing size, enter the chart with the maximum load of the most heavily loaded bearing and the required travel life. Mark where the two lines intersect. All Ball Bushing Bearing sizes that pass through or above and to the right of this point may be suitable for this application.

Note: For the purpose of using this chart, load on most heavily loaded bearing = maximum applied load/ K_0 .
Where K_0 can be determined from the Polar Graph to the right.

Polar Graphs

The actual dynamic load capacity of a Ball Bushing Bearing is determined by the orientation of the bearing or direction of the applied load. The load correction factor K_0 is found by knowing the direction of the applied load relative to the orientation of the bearings ball tracks and referring to the polar graph. To determine the actual dynamic load capacity, multiply the proper correction factor by the dynamic load capacity listed in the product table on the previous page.

Polar Graphs

The actual dynamic load capacity of a Ball Bushing Bearing is determined by the orientation of the bearing or direction of the applied load. The load correction factor K_0 is found by knowing the direction of the applied load relative to the orientation of the bearings ball tracks and referring to the polar graph. To determine the actual dynamic load capacity, multiply the proper correction factor by the dynamic load capacity listed in the product table on the previous page.

Wire Straightening/Feeding Mechanism

Objective

Redesign a wire straightening/feeding mechanism for a wire drawing machine that improves cycle time and minimizes downtime.

Solution

Combine the performance advantages of the Precision Steel Ball Bushing Bearing with the operating efficiency of Thomson ball screws.

Products Specified

- 4 - A162536 (Precision Steel Ball Bushing Bearings)
- 2 - 1 S CTL (60 Case® LinearRace®)
- 1 - .625 x .200 (Thomson ball screw assembly)

Benefits

By replacing high-friction plain bearings with Precision Steel Ball Bushing Bearings, service life increased from six months to four years. This significantly reduced downtime and maintenance requirements and provided increased productivity.

XR Ball Bushing® Bearing Products

Thomson XR Ball Bushing Bearing products offer:

- Five times the load capacity or 125 times the travel life of conventional linear bearings. This dramatic increase in travel life reduces downtime and maximizes productivity.
- Three times the rigidity of conventional linear bearings. This increase in stiffness provides immediate improvements in machine positioning accuracy and repeatability.
- The RoundRail Advantage combined with travel speeds up to 5 ft./s. Derating factors commonly found in linear guide products are eliminated.
- Ease of maintenance. When normal maintenance requires bearing replacement, XR Ball Bushing Bearings can be quickly and cost effectively replaced without scrapping the entire system – another shortcoming of some linear guides.
- Double-acting seals at both ends that keep out contamination and retain lubrication.
- Lasting precision alignment by combining the non-wear characteristics of the XR Ball Bushing Bearing with a rigid ductile iron pillow block.
- High accelerations and operating speeds without a dramatic increase in the power consumption commonly seen with high-friction v-way and flat-way systems.

XR Ball Bushing Bearing products provide five times the load capacity or 125 times the travel life and three times the rigidity of conventional linear bearings. These improvements are centered around four technologically advanced components: the XR Ball Bushing Bearing, the XPBO Ball Bushing pillow block, the XL 60 Case® LinearRace® (shaft) and the XSR 60 Case LinearRace support rail.

Figure 1

Figure 2

XR Ball Bushing Bearing

The dramatic increase in load capacity and/or travel life is provided by the XR Ball Bushing Bearing's advanced plate design. Each ball-conforming bearing plate is precision ground, providing smooth and virtually friction-free linear movement. The bearing plate length has also been maximized to increase the number of rolling elements in the load carrying zone. The position of each XR bearing plate helps to maximize the load capacity in both pull-off and down-loading conditions.

XPBO Ball Bushing Pillow Block

Each XR Ball Bushing Bearing can be housed in a rigid ductile iron pillow block (Figure 1). The XPBO pillow block provides the stiffness required in high load applications (Figure 2). Each XPBO is equipped with four mounting holes for easy assembly to the table surface.

XL 60 Case LinearRace

Available factory mounted to XSR 60 Case LinearRace support rail is a hardened and precision-ground 60 Case LinearRace (Figure 1). Each 60 Case LinearRace is ground to a surface finish less than 10 Ra microinch and is straight to .001 inch per foot cumulative. Roundness of each 60 Case LinearRace is controlled through proprietary techniques that result in a roundness of 80 millionths of an inch. Each XL 60 Case LinearRace is held to these world-class quality standard to assure maximum system performance and travel life.

XSR 60 Case LinearRace Support Rails

Rigidity always starts by continuously supporting the 60 Case LinearRace and bearing system (Figure 1). The large ductile iron alloy cross-section of the XSR provides maximum rigidity and stiffness (Figure 2). The increased number of standard 60 Case LinearRace mounting holes add further stiffness and stability to the system.

The RoundRail Advantage

The RoundRail Advantage is the inherent ability of an XR Ball Bushing Bearing system to accommodate torsional misalignment (caused by inaccuracies in carriage or base machining or by machine deflection) with little increase in stress-to-bearing components. Installation time and cost are minimized, and system performance is maximized.

XR Ball Bushing® Bearings for Continuously Supported Applications

XR Ball Bushing Bearings and 60 Case® LinearRace® (Dimensions in inches)

Part Number		Nom. Dia.	Length C	60 Case LinearRace Diameter d
XR Ball Bushing Bearing	60 Case LinearRace*

- (1) XPB0 pillow blocks are designed to give extra rigid support and are therefore dimensioned to provide the interference fits when used with 60 Case LinearRace class XL. If used with class L 60 Case LinearRace the fit-up values would be .0022P/.0002P for the 2 inch size and .0029P/.0003P for the 3 inch size.
- (2) The Dynamic Load Capacity is based on a rated travel life of 2 million inches. The actual Dynamic Load Capacity can be affected by the orientation of the bearing or the direction of the applied load. For Dynamic Load Correction Factors, see following polar graphs.

Load/Life Graph

(Lines indicate limiting load for given Ball Bushing Bearing)

Determining Ball Bushing Bearing Size

To determine the proper Ball Bushing Bearing size, enter the chart with the maximum load of the most heavily loaded bearing and the required travel life. Mark where the two lines intersect. All Ball Bushing Bearing sizes that pass through or above and to the right of this point may be suitable for this application.

Note: For the purpose of using this chart, load on most heavily loaded bearing = maximum applied load/ K_0 . Where K_0 can be determined from the Polar Graph to the right.

Polar Graphs

The actual dynamic load capacity of a Ball Bushing Bearing is determined by the orientation of the bearing or direction of the applied load. The load correction factor K_0 is found by knowing the direction of the applied load relative to the orientation of the bearings ball tracks and referring to the polar graph. To determine the actual dynamic load capacity, multiply the proper correction factor by the dynamic load capacity listed in the product table on the previous page.

X-Y-Z System

Objective

Build a rigid X-Y-Z System designed to perform welding and flame-cutting tasks.

Solution

Extra Rigid Ball Bushing® Bearings will be used on the X-axis to minimize deflection of the cantilevered Y-axis. Self-aligning Super Smart Ball Bushing Bearings are used on the Y and Z axis to simplify the assembly.

Products Specified

X-axis

- 4 - XR320PN (XR Ball Bushing Bearing)
- 2 - XSRA32 x 108 in (60 Case® LinearRace® support rail assembly)

Y-axis

- 4 - SSU120PN (Super Smart Ball Bushing Bearing [Open Type])
- 2 - LSR-12-PD x 48 in (Low Profile 60 Case LinearRace Support Rail)
- 2 - 3/4 L PD CTL x 48 in (60 Case LinearRace)

Z-axis

- 4 - SSU12 (Super Smart Ball Bushing Bearing)
- 2 - 3/4 L CTL x 36 in (60 Case LinearRace)

Benefits

The high load capacity, rigidity and RoundRail Advantage of the Super Smart and XR Ball Bushing Bearings provided an easy to assemble system with a repeatability of $\pm .005$ in.

RoundWay® Linear Roller Bearing Products

Thomson RoundWay Linear Roller Bearings offer:

- Up to 20 times the load capacity of conventional linear ball bearings. This dramatic increase allows for more compact machine designs with a reduction in hardware costs.
- A rigid design that provides high accuracy while tolerating the high shock loads common to machine tool applications.
- A coefficient of friction as low as .005. When replacing v-ways or flat-ways, RoundWay linear roller bearings allow for the use of smaller, less expensive drives, motors, belts, gears and ball screws.
- A self-aligning capability that reduces installation time and cost.
- An eccentric trunnion pin that adjusts bearing height to compensate for minor inaccuracies in mounting base flatness or machining accuracy. Installation is quicker and easier than old style, conventional way systems.
- Availability of an integral wiper that protects against contamination while retaining lubrication.
- Interchangeable components for quick, cost-effective machine maintenance. There is no need to scrap the entire way system, a problem with some linear guide products.
- The RoundRail Advantage, combined with the self-aligning feature, eliminates the need for derating factors commonly seen with linear guides.

Figure 1

RoundWay Operating Principle

Thomson invented the RoundWay® linear roller bearing for use in high-load, heavy duty applications. Each RoundWay bearing combines the high load capacity of hardened and ground steel recirculating rollers with a rigid, malleable iron pillow block, providing extremely high load capacity with smooth linear travel. The RoundWay linear roller bearing comes in both a single and dual version. A single RoundWay linear roller bearing does not resist side loads and is, therefore, always used in conjunction with a dual version, unless used in a configuration as shown in Figures 2, 3 and 4 on page 99.

Each RoundWay linear roller bearing is designed for use on 60 Case® LinearRace®. The 60 Case LinearRace shaft can be continuously supported using type LSR, SR or XSR 60 Case LinearRace support rails or intermittently supported using the adjustable Waymount® LinearRace supports type WM.

The RoundWay linear roller bearing consists of four basic parts: the bearing race, the roller assembly, the eccentric trunnion pin and the mounting block. The rolling elements of a RoundWay linear roller bearing are a series of concave rollers interconnected and linked by a chain assembly. As load is applied to the mounting block, it is transferred through the bearing race and roller assembly to the supported 60 Case LinearRace. Connecting the mounting block to the RoundWay bearing and roller assembly is an eccentric trunnion pin that allows the height of the RoundWay linear roller bearing to be adjusted to compensate for variations in the mounting surfaces or the buildup of tolerances between component elements. The eccentric trunnion pin can also be used to preload the RoundWay bearing by eliminating internal bearing clearance. After the eccentric trunnion pin has been adjusted, it can be held in place by simply tightening the lock screw.

Self-Aligning

The RoundWay single and dual bearings are designed with a built-in, self-aligning capability that absorbs misalignment caused by inaccuracies in carriage or base machining. The RoundWay single bearing has an additional built-in, self-aligning capability that allows it to absorb misalignment caused by two slightly out-of-parallel 60 Case LinearRace ways. This feature is realized when two RoundWay single bearings are mounted on one 60 Case LinearRace, and two dual RoundWay bearings are on a parallel 60 Case LinearRace (Figure 1 on page 99).

RoundWay Linear Roller Bearing Mounting Configurations

Figure 1

Figure 2

Figure 3

Figure 4

Figure 5

Figure 6

Figure 7

Figure 8

RoundWay Bearing Mounting Arrangements

RoundWay bearings are available in single mounting blocks or dual V-blocks. The basic race and roller assembly can be purchased separately, along with the suitable type of trunnion pin for mounting directly in the carriage or other machine elements (see page 113). When using either type of cantilever mounting trunnion pin, deflection may be experienced under heavy loads.

The illustrations to the left are a few schematic suggestions for arrangements of RoundWay bearings and 60 Case LinearRace ways. The load directions of the bearings are indicated by arrows.

The first group (Figs. 1 through 4) depends on gravity to hold the carriage on the ways.

The second group shows arrangements that will carry loads in any direction. The first two figures (Figs. 5 and 6) are similar to the second two figures (Figs. 7 and 8), except for reverse orientation of horizontal, load-carrying bearings.

All schematics on this page can be pre-loaded except Fig. 1. In this arrangement, the maximum side load permitted is 50% of the applied vertical load on the Dual RoundWay bearing.

IMPORTANT!

A single RoundWay bearing does not resist side loads. Therefore, dual RoundWay bearings or the equivalent are always used in combination with single units.

RoundWay® Linear Roller Bearings

for Continuously Supported Applications

RoundWay Linear Roller Bearing Type (Type A,B,C)

- Available in 1/2- through 4-inch diameters.
- Load capacity range between 970 and 24,000 lb_f.
- Travel speeds up to 100 ft./s.
- Accelerations up to 450 ft./s².
- Can be adjusted to compensate for variations in the mounting surface.
- Self aligning in all directions.
- Designed to compensate for two 60 Case® LinearRace® ways that are slightly out of parallel.
- Can be mounted in a custom housing.
- Available with a two-piece seal that retains lubrication while protecting the bearing from the ingress of dirt or contaminants.

RoundWay Linear Roller Bearing (Single Type S)

- Available in 1/2- through 4-inch diameters.
- Load capacity range between 970 and 24,000 lb_f.
- Travel speeds up to 100 ft./s.
- Accelerations up to 450 ft./s².
- Can be adjusted to compensate for variations in the mounting surface.
- Self aligning in all directions.
- Designed to compensate for two 60 Case LinearRace ways that are slightly out of parallel.
- Should always be used in conjunction with RoundWay Dual version.
- Can be mounted in a custom housing.
- Available with a two-piece seal that retains lubrication while protecting the bearing from the ingress of dirt or contaminants.
- Easily mounted to carriage with four mounting bolts.

RoundWay Linear Roller Bearing (Dual Type V)

- Available in 1/2- through 4-inch diameters.
- Load capacity range between 1370 and 35,000 lb_f.
- Travel speeds up to 100 ft./s.
- Accelerations up to 450 ft./s².
- Can be adjusted to compensate for variations in the mounting surface.
- Self aligning in all directions.
- Available with a two-piece seal that retains lubrication while protecting the bearing from the ingress of dirt or contaminants.
- Easily mounted to carriage with four mounting bolts.

Overhead Carriage for Log-Processing Machine

Objective

Design overhead carriage system using RoundWay® linear roller bearings mounted on 60 Case® LinearRace® ways.

Solution

RoundWay linear roller bearings' high load capacity will be used to move heavy logs into and out of the band saws. The carriages shuttle back and forth on 100-foot-long 60 Case LinearRace ways until the final cut is made.

Products specified

- 2 - RW32V (RoundWay Linear Roller bearing Dual Type)
- 2 - RW32S (RoundWay Linear Roller bearing Single Type)
- 2 - 2 L PD CTL x 100 ft (60 Case LinearRace)

Benefits

RoundWay linear roller bearings provide operating speeds up to 100 ft/s, optimizing productivity and minimizing cost. The RoundWay bearings' low coefficient of friction allows the use of smaller, less expensive drive motors, belts, linkages and gears. The seal keeps out wood chips and other contaminants and maximizes bearing life.

FluoroNyliner® Bushing® Bearings

Thomson FluoroNyliner Bushing Bearings offer:

- High performance in contaminated, washdown or submerged environments.
- Proprietary, self-lubricating, composite bearing liner TEP 950.
- Low friction, ideally suited for linear and rotary motion.
- Precision-machined aluminum sleeve.
- Excellent performance in high-vibration and mechanical shock applications.
- Corrosion resistance.
- Product availability in industry standard sizes from 0.25" to 2.00".
- Eight bearing configurations, include closed, open, self-aligning, precision and compensated IDs.
- Load capacities up to 14,000 lb_f.
- Closed, open, and flanged pillow blocks available in single or twin versions.
- Available from distributors worldwide.

¹ Compensated I.D. bearings have additional running clearance, ideally suited for high speed and non-parallel shaft applications.

FluoroNyliner® Bushing® Bearing Pillow Blocks

For the easiest installation, order pillow blocks with factory installed FluoroNyliner Bushing Bearings.

Three Pillow Block Configurations

Closed Bearing Pillow Blocks

- For end-supported applications.
- Choose twin pillow blocks for twice the load capacity.
- Order with seals for heavily contaminated environments.
- Available as single or twin pillow blocks.

Open Bearing Pillow Blocks

- For continuously supported applications.
- Choose compensated I.D. bearings for non-parallel shafting.
- Order with seals for heavily contaminated environments.
- Available as single or twin pillow blocks.

Flanged Pillow Blocks with Closed Bearings

- For low-profile applications such as packaging equipment.
- Choose precision I.D. bearings for precision fit-up.
- Available with self-aligning or compensated I.D. bearings.
- Available as single or twin pillow blocks.

Closed Pillow Blocks with Self-Aligning Bearings

† Sizes .25, .375 and .500 have oil lubricant fitting. Sizes .625 and above have 1/4-28 access for lubrication.

1 Compensated I.D. bearings have additional running clearance, ideally suited for high speed and non-parallel shaft applications.

Note: For pillow block seals or non-self-aligning bearings, see Part Number Matrix below.

Not all options are available in all sizes.

See catalog pages or contact Thomson Customer Support for combination availability.

For additional information on bearing options, see page 263.

Frictional Characteristics

- I) Static: Tests performed on dry FNYBU16 bearings indicate that the force required to initiate motion is dependent upon the applied load according to the following equation:

$$F_f = 1.3 + 0.18 F_a$$

Where:

F_f = Friction force, static (lb_f)

F_a = Applied force (lb_f)

- II) Dynamic: The coefficient of friction is dependent upon both the pressure and the velocity.

Pressure: Coefficient of friction decreases rapidly with increase in pressure.

Velocity: Coefficient of friction increases with an increase in velocity and quickly stabilizes.

For example, at 100 psi, the coefficient of friction is approximately 0.25 for velocities of 100 ft./min and higher.

Characteristic	Limit
Linear Temperature Range	-400° F to 550° F (-240° C to 288° C)
Velocity, dry	140 ft/min. Continuous
Velocity, dry	400 ft/min. Intermittent
Velocity, Lubricated	400 ft/min. Continuous
Pressure	1500 psi
PV	10,000 psi ft/min

Wear Rates and Life Expectancy

- I) Wear rates: The wear rates of a plain bearing are dependent upon a number of variables, including characteristics of the counter-face, velocity, lubrication, load and contamination. Tests conducted on FNYBU16 bearings operating in the linear mode at approximately 70 ft./min, and at a pressure of approximately 33 psi, demonstrated an average radial wear change of 0.0011 inches, after 80 million inches of travel. This yields the following formula:

$$W_R = 14 \times (10^{-6}) \times T$$

Where:

W_R = Radial Wear (micro-inches)

T = Travel (inches)

- II) Life expectancy: The life expectancy may be calculated from the wear rate. This is normally associated with the allowable radial clearance for a given application. The absolute wear limit is the bearing material thickness, which is 0.028 inches.

Food-Grade FluoroNyliner® Bushing® Bearings

Description

Thomson Food-Grade FluoroNyliner Bushing Bearings are the first stainless steel, corrosion-resistant, self-lubricating Bushing Bearing with FDA-compliant liner materials. They are designed for use in food processing, pharmaceutical and medical applications.

The corrosion-resistant sleeve is stainless steel, while the self-lubricating liner is FDA and USDA compliant.

As the bearing does not utilize ball bearings, it can be run on soft shafting such as Thomson "corrosion proof" 316 Stainless Steel or Ultra Light Aluminum LinearRace® shafting, making the Food-Grade FluoroNyliner excel in washdown applications.

Features and Benefits

- 303 Stainless Steel, corrosion-resistant shell will not rust or otherwise contaminate applications.
- Self-lubricating liner eliminates costly maintenance and labor.
- Non-magnetic and corrosion resistant.
- FDA, USDA and washdown compliant.
- Special machining options available.
- Available in open and closed types.

Maximum PV, continuous	10,000 psi ft/min
Maximum P, static	1,000 psi
Maximum V, no load	400 ft/min
Temperature Range	-400°F to 385°F / -240°C to 196°C
Shaft Finish, recommended	8-16 Ra microinch
Coefficient of Friction	.12 - .20

FluoroNyliner LinearRace Options

Food-Grade FluoroNyliner Bushing Bearings can be combined with a wide range of corrosion-resistant LinearRace options, depending on the application requirements:

- **440C Stainless Steel** Corrosion-resistant shafting with 50 HRC min case hardness
- **316 Stainless Steel** “Corrosion proof” shafting with no carbon content
- **Ultra Light Aluminum** Hard-anodized coated, lightweight aluminum shafting
- **Plated 60 Case® Options** Include Hard Chrome, Thin Dense Chrome and Black Oxide

Pillow Block Options

Stainless steel pillow block assemblies are also available per request in closed, open and flanged styles, all of which are available as single or twin styles. Minimum orders may apply.

Polymer Bushing Bearings

Description

Thomson polymer bushing bearings offer linear motion designers a reliable, yet economical, option for machines in which moment load is non-critical or where contamination is a concern. These bearings are also useful for applications that require shafting that is incompatible with Thomson Ball Bushing® Bearings such as aluminum or 316 stainless steel.

Handling loads up to 9000 N (2023 lbf), polymer bushing bearings provide a corrosion-resistant option for low-load, low-speed applications. When combined with round rail shafting, pillow blocks or other assembly components, polymer bushing bearings deliver a budget-friendly linear motion solution to a number of applications.

Polymer Bushing Bearings Applications

- Factory Automation
- Robotics
- Health and Fitness
- Medical Automation
- Woodworking
- Packaging
- Food and Beverage
- Vending

Polymer Bushing Bearings Highlights

- Available in sizes of 6 to 50 mm (closed) and 10 to 50 mm (open)
- Maintenance-free operation
- Polymer liners reduce noise
- Dirt and dust resistant
- Anodized aluminum adapter
- Available with aluminum pillow blocks
- Operate in temperatures ranging from - 50°C to 90°C (- 58°F to 194°F)
- Available in open and closed types

Accessories

Described here are accessories for Linear Ball Bushing® Bearings and pillow blocks, including retaining rings, external seals, integral seals and resilient mounts.

Lube for Life Mod Kits

Lube for Life modification kits provide continuous bearing lubrication and enhanced protection for a broad range of applications. The Lube for Life attachments consist of a section of oil-saturated polymer actively compressed by a contact spring, inside a standard pillow block seal. Mod Kits are for use with non self-lubricating Super and Super Smart Ball Bushing® Bearing pillow blocks. Each Mod Kit includes two Lube for Life cartridges and assembly instructions.

Retaining Rings

Internal Retaining Rings (Type PR)

Push-in retaining rings, as shown, are for use with Super Smart, Super and Precision Steel Ball Bushing closed type bearings. Each retaining ring is installed inside the housing bore at each end of the Ball Bushing bearing.

(Dimensions in inches)

Resilient Mounts

Resilient Ball Bushing® Bearing Mounts for Ease of Installation

Used with Precision Steel Ball Bushing Bearings Type A and XA. Resilient Ball Bushing Bearing mounts are sometimes used when absolute rigidity is not essential and where a slightly larger housing bore can be accommodated. The self-aligning feature of these mounts guarantee uniform load distribution over the entire length of the load carrying balls and compensates for slight errors in housing bores and parallel 60 Case® LinearRace® alignment. The mount consists of a band of resilient material that can be easily mounted to the outside diameter of the Ball Bushing Bearing. After it is installed in the housing bore, it provides permanent resilient, self-aligning support for the bearing. Resilient mounts consist of one rubber ring, two spacers and two retaining rings. Ball Bushing Bearings must be purchased separately.

Thomson Linear Motion Metric Components

The RoundRail Advantage - The inherent ability of a RoundRail Ball Bushing Bearing system to absorb torsional misalignment caused by inaccuracies in carriage or base machining or machine deflection...with little increase in stress to bearing components.

Super Smart Ball Bushing Bearings

Thomson Super Smart Ball Bushing Bearings represent a major advancement for linear bearing technology worldwide.

This patented, self-aligning linear bearing provides two times the load carrying capacity of the industry standard Thomson Super Ball Bushing Bearing. Super Smart Ball Bushing Bearings also provide eight times the bearing life and up to five times the LinearRace shaft life when used in place of standard Super type bearings. See page 133.

Metric Ball Bushing Bearings

Super Smart Ball Bushing Pillow Blocks

Thomson Super Smart Ball Bushing pillow blocks available in closed, adjustable and open styles in both single and twin versions.

To minimize installation time and cost, the Super Smart Ball Bushing Bearing can be ordered factory installed in an industry standard single or twin pillow block. The closed-type pillow block is used in end-supported applications for spanning or bridging a gap. The open style is used in continuously supported applications when maximum rigidity and stiffness is required. Each Super Smart pillow block is complete with integral double-acting seals which keep out contaminants, retain lubrication and maximize bearing life. Since each pillow block is dimensionally interchangeable with industry standard pillow blocks, system performance improvements can be realized immediately. See page 142.

MultiTrac Ball Bushing Bearings

Rigid, high load capacity, linear bearings

Extremely rigid MultiTrac Ball Bushing Bearings give you less deflection and twice the load capacity or eight times the travel life of conventional Ball Bushing Bearings. This increased bearing performance significantly reduces downtime and maintenance, while increasing machine reliability. The improvement in bearing capacity permits designers to optimize system compactness and minimizes hardware costs. The bearing's patented ball control technology eliminates binding and chatter (stick-slip) common to high-friction, plain bushings. See page 148.

Super Ball Bushing[®] Bearings and Pillow Blocks

High performance from superior design.

A coefficient of friction as low as 0.001. This allows the use of smaller, less expensive motors, belts, gears and ball screws when replacing high-friction, plain bearings. A self-aligning capability up to 0.5° compensates for inaccuracies in base flatness or carriage machining. Achieved with Thomson Super Bearing plates, which have defined radius crowns for maximized self-alignment accuracy. Accelerations as high as 150 m/s² and steady state travel speeds up to 3 m/s without the derating factors commonly required with linear guides. Quick to ship, drop-in replacement parts for existing applications. Twin version with two Super Ball Bushing Bearings providing twice the load capacity or eight times more travel life than the single version. See page 160.

Application

Thomson products are engineered to world-class performance standards so that you can specify them with confidence worldwide. This Engineering Support section provides charts, formulas and technical information for:

- Ball Bushing Bearing selection
- Load considerations for horizontal-, side- and vertical-mounted applications
- Shaft deflection
- Installation
- Tolerance zones for internal and external diameters

Super Smart Ball Bushing Bearings

Metric Ball Bushing Bearings

Thomson Super Smart Ball Bushing Bearing products offer:

- Up to six times the load capacity or 216 times the travel life of conventional linear bearings.
- Twice the load capacity or eight times the travel life of industry standard Thomson Super Ball Bushing Bearings.
- Universal self-alignment feature that compensates for misalignment of housing bores and 60 Case® LinearRace® shaft deflection, optimizes load distribution between ball tracks and assures uniform ball loading over the entire length of the bearing plate. Installation time and cost is minimized, while bearing performance and life is maximized.
- Technologically advanced design that allows the bearing to maintain its diametral fit-up when installed in a housing that is slightly out-of-round.
- Up to 400% longer LinearRace shaft life and minimal machine downtime when replacing conventional linear bearings or the standard Super Ball Bushing Bearing.
- RoundRail Advantage combined with universal self-alignment, eliminating the need for derating factors commonly required when using linear guides.
- Coefficient of friction as low as 0.001. This allows the use of smaller, less expensive motors, belts, gears and ball screws, when replacing high friction, plain bearings.
- Closed and open configurations.
- Double-lip integral wipers that keep out dirt while retaining lubrication. Travel life is maximized.

Available in both European and JIS standard dimensions.

Part Number Description and Specification

Super Smart Ball Bushing® Bearings (Closed Type) for End-Supported Applications

SSEM16OPNWW-CR

Not all options are available in all sizes.

See catalog pages or contact Thomson Customer Support for combination availability.

For additional information on bearing options, see page 267.

The Super Smart Advantage

Advantage: Load Capacity

The Super Smart Ball Bushing Bearing provides twice the load capacity of the industry standard Thomson Super Ball Bushing Bearing and six times the load capacity of conventional linear bearings.

Metric Ball Bushing Bearings

Downsizing

The photograph above shows a conventional Ball Bushing Bearing, Super Ball Bushing Bearing and Super Smart Ball Bushing Bearing, all of which have the same load capacity.

Advantage: Travel Life

The Super Smart Ball Bushing Bearing provides eight times the travel life of the industry standard Thomson Super Ball Bushing Bearing and 216 times the travel life of conventional linear bearings.

Super Smart Ball Bushing® Bearings (Closed Type)

Super Smart Ball Bushing Bearings (Closed Type) (Dimensions in mm)

Part Number			$d^{(4)}$	D	C h14	C1 H13	C2 min.	Number of Ball Tracks	Mass (kg)	Dynamic Load W ⁽¹⁾⁽³⁾ (N)	Load Limit W _q ⁽²⁾⁽³⁾ (N)

(1) For rated travel life of 100 km. For longer travel lives, reduce load to $\bullet(100/L)^{0.33}$ where L (km) is the required travel life. Do not exceed the Dynamic Load Rating for travel life of less than 100 km.

(2) The Load Limit is the maximum load that may be applied to a bearing/shaft. It is important to analyze the application so that peak and/or shock do not exceed the Load Limit.

(3) The load capacities W and W_q are valid for a resultant load applied at 90° with the ball tracks oriented as shown in the polar graphs below. If the resultant acts along another direction, the appropriate multiplicative correction factor K_q should be applied to W and W_q respectively. Open type bearings have reduced load capacities when used in pull-off situations.

(4) Internal bearing diameter is affected by the housing bore. see Table 1.

(5) Hole for anti-rotation pin is below centerline.

NOTE: For part number description and specifications, see page 132.

NOTE: External seals and retaining rings are available. See page 172 for specifications.

NOTE: For additional technical information. see the Engineering section beginning on page 256.

(3) The load capacities W and Wq are valid for a resultant load applied at 90° with the ball tracks oriented as shown in the polar graphs below. If the resultant acts along another direction, the appropriate multiplicative correction factor Kq, should be applied to W and Wq respectively. Open type bearings have reduced load capacities when used in pull-off situations.

(4) Internal bearing diameter is affected by the housing bore, see Table 1.

(5) Hole for anti-rotation pin is below centerline.

NOTE: For part number description and specifications, see page 132.

NOTE: External seals and retaining are available. See page 172 for specifications.

NOTE: For additional technical information, see the Engineering section beginning on page 256.

Table 1 - Standard Diametral Clearances

Nominal Shaft Diameter d (mm)	Nominal Housing Bore Diameter d (mm)	Diametral Clearance

Super Smart Ball Bushing® Bearings - JIS Specifications (Closed Type)

Designed to be used for new or existing JIS (Japanese Industrial Standard) designs

Part Number			Dimensions (mm)						Number of Ball Tracks	Mass (kg)	Dynamic Load W ⁽¹⁾⁽³⁾ (N)	Load Limit W _q ⁽²⁾⁽³⁾ (N)
Without Integral Wipers	With One Integral Wiper	With Two Integral Wiper	Nominal LinearRace Dia. d	C h14	C1 h13	C2 min.	Nominal Housing Bore Dia. D ⁽²⁾					
SSJM16	SSJM16W	SSJM16WW	16	37	26.5	1.60	28	10	.030	2200	2400	
SSJM20	SSJM20W	SSJM20WW	20	42	30.5	1.60	32	10	.066	4000	4400	
SSJM25	SSJM25W	SSJM25WW	25	59	41	1.85	40	10	.133	6700	7300	
SSJM30	SSJM30W	SSJM30WW	30	64	44.5	1.85	45	10	.202	8300	9100	
SSJM40	SSJM40W	SSJM40WW	40	80	60.5	2.10	60	10	.392	13700	15000	

(1) For rated travel life of 100 km. For longer travel lives, reduce load to $\bullet(100/L)^{0.33}$ where L (km) is the required travel life. Do not exceed the Dynamic Load Rating for travel life of less than 100 km.

(2) The Load Limit is the maximum load that may be applied to a bearing/shaft. It is important to analyze the application so that peak and/or shock do not exceed the Load Limit.

(3) The load capacities W and W_q are valid for a resultant load applied at 90° with the ball tracks oriented as shown in the polar graphs below. If the resultant acts along another direction, the appropriate multiplicative correction factor K_q should be applied to W and W_q respectively. Open type bearings have reduced load capacities when used in pull-off situations.

(4) Refer to Table 1 to find the diametral tolerance between the LinearRace and Super Smart Ball Bushing bearing for bearing installation in housing H7 or J7 tolerance.

NOTE: For part number description and specifications, see page 132.

NOTE: External seals and retaining are available. See page 172 for specifications.

NOTE: For additional technical information, see the Engineering section beginning on page 256.

30	45	+39 +9	+28 -2
40	60	+44 +11	+35 -1

For Super Smart Ball Bushing Bearings mounted in a housing and with LinearRace shafts, h6 tolerances

Application

Cam-Actuated Part Transfer Mechanism for Multiple-Transfer Press

Objective

Improve production rate and increase the service life of a transfer table mechanism.

Solution

Replace the conventional linear bearings with adjustable Super Smart twin pillow blocks.

Products Specified

- 2 - SSETWNAM20DD (Super Smart Twin Pillow Blocks)
- 4 - ASBM20 (Shaft support blocks) Blocks
- 2 - 20 MM CTL X 600 mm 60 Case LinearRace Shaft

Benefits

The table achieved maximum cycle efficiency by reducing costly downtime and improving service life. Bearing life is increased from 1 to 8 years.

X-Y Inspection System

Objective

Accurately position an inspection probe of an X-Y system over small electronic components.

Solution

Design an X-Y system with Super Smart Ball Bushing® pillow blocks to provide accurate and repeatable movement of the test probe. Utilize Thomson linear motion systems on the Y-axis to reduce cost and installation time.

Benefits

Outstanding positioning accuracy and repeatability was provided by the adjustable pillow blocks and ball screws. The use of a pre-engineered, pre-assembled linear motion system on the Y-axis saved valuable design and assembly time.

Products Specified

X-axis

- 2 - SSETWNAM16DD (Super Smart Twin pillow blocks)
- 4 - ASBM16 (Shaft support blocks)
- 2 - 16 MM CTL X 600 MM (60 Case® LinearRace® shaft)
- 2 - 12 x5 Thomson ball screw assemblies

Y-axis

- 1 - 2CAM12 (pre-assembled linear motion system)
- 1 - 12 x5 Thomson ball screw assembly

Super Smart Pillow Blocks

Thomson Pillow Blocks with factory-installed Super Smart Ball Bushing® Bearings offer:

- Up to six times the load capacity or 216 times the travel life and five times the LinearRace® shaft life when replacing conventional linear bearing pillow blocks.
- Accelerations as high as 150 m/s² and steady state travel speeds up to 3 m/s without the derating factors commonly required with linear guides.
- Replaceable bearing components for quick, cost-effective machine maintenance and minimal downtime.
- Standard, double-acting, integral seals at both ends which keep out dirt, grit and other contaminants, retain lubrication and maximize bearing life.
- Adjustable, closed and open styles.
- Lubrication hole for easy maintenance.
- Tapped or thru hole mounting configuration for ease of installation.
- Twin version with two Super Smart Ball Bushing Bearings providing twice the load capacity or eight times more travel life than the single version.
- A single bearing version that self aligns in all directions, minimizing installation time and cost.

Note: See page 131 for information on Thomson Super Smart Ball Bushing Bearings.

Part Number Description and Specification

Super Smart Ball Bushing Bearings (Closed Type) for End-Supported Applications

SSETWNM160PNWW-CR

Metric Ball Bushing Bearings

Not all options are available in all sizes.

See catalog pages or contact Thomson Customer Support for combination availability.

For additional information on bearing options, see page 263.

Application

Punch Press

Objective

Reduce deflection of plate loader to minimize scrap and improve cycle speed.

Solution

Replace super type linear bearings with Super Smart pillow blocks and Smart Rail assemblies to improve accuracy, load capacity, service life, efficiency and reduce downtime.

Products Specified

- 4 - SSEPBOAM25DD (Super Smart Pillow Blocks)
- 2 - LSRAM25 x 900 mm Smart Rail assemblies

Benefits

By retrofitting with Super Smart Pillow Blocks, machine productivity increased 700%. Smart Rail assemblies provided reduced deflection during plate loading. The retrofit required minimum downtime due to the pillow blocks' ease of installation.

MultiTrac® Ball Bushing® Bearings

Thomson MultiTrac Ball Bushing Bearings offer:

- Patented, multiple-track design with up to twice the load-carrying capacity, or eight times the life, of conventional linear bearings.
- Rigid design for minimal deflection, assuring accurate, precise positioning.
- Coefficient of friction as low as 0.001.
- Patented ball control technology, which eliminates binding and chatter (stick-slip) common to high-friction, plain bushings and sliding-way bearings.
- RoundRail Advantage which, combined with the advanced MultiTrac Ball Bushing Bearing design, eliminates the need for the derating factors commonly required with square rail linear guides.
- Steady state speeds up to 3 m/s and accelerations up to 150 m/s², without the use of derating factors.
- Wear-resistant, engineered-polymer retainers to reduce inertia and noise levels.
- Adjustable, closed and open configurations.
- Stainless steel (440C) option available in all sizes for corrosive environments.

Part Number Description and Specification

Super Smart Ball Bushing Bearings (Closed Type) for End-Supported Applications

MAM160PNWWSS

Not all options are available in all sizes.

See catalog pages or contact Thomson Customer Support for combination availability.

For additional information on bearing options, see page 263.

NOTE: For additional technical information, see the Engineering section beginning on page 252.

MultiTrac Ball Bushing Bearings

Thomson MultiTrac Ball Bushing Bearings are designed with greater rigidity and up to twice the load capacity of conventional linear bearings. The design incorporates a one-piece, bearing-quality, steel sleeve (see Figure 1) for maximum rigidity. The single-piece, engineered-polymer ball retainer provides smooth, quiet operation.

Figure 1

Figure 2

Twice the Load Capacity

The bearing's load capacity is improved by the optimal positioning of the load tracks. This places the maximum number of load-bearing balls in the load zone (see Figure 1).

High Speed Operation

The advanced design also improves the bearing's ball control. This allows accelerations as high as 150 m/s^2 and travel speeds up to 3 m/s.

Integral Seals

The bearing includes double-acting integral wipers, which keep out dirt, grit and other contaminants, and retain bearing lubrication.

Improved Ball Control

Through advanced, computer-aided design techniques, ball control improvements assure smooth entry and exit of the balls in and out of the load zone.

Ideal for Corrosive Environments

Optional stainless steel (440C) resists rust and corrosion.

Application

Wire Straightening/Feeding Machine

Objective

Redesign a wire straightening/feeding mechanism for a wire drawing machine that improves cycle time and minimizes downtime.

Solution

Combine the performance advantages of the MultiTrac[®] Ball Bushing[®] Linear Bearings with the operating efficiency of Thomson ball screws.

Products Specified

- 4 - MAM16WW (MultiTrac Ball Bushing linear bearings)
- 2 - 16 MM CTL x 600 MM (60 Case[®] LinearRace[®] shaft)
- 1 - 16 x 5 Thomson ball screw assembly

Benefits

Because MultiTrac Ball Bushing Linear Bearings have twice the load capacity of conventional linear bearings, service life increased from six months to four years. This significantly reduced downtime and maintenance requirements and provided increased productivity with substantial cost savings.

Application

Pick and Place X-Y System

Objective

Build an X-Y System that transfers the work piece between two separate machining stations.

Solution

Assemble the X-Y System utilizing Super Smart Ball Bushings Bearing pillow blocks on end-supported shafts for the X-axis and continuous supported 60 Case LinearRace shaft on the Y-axis. Utilize Thomson ball screws for high-speed positioning.

Products Specified

X-axis

2 - 40 MM CTL x 1200 MM (60 Case LinearRace)

4 - SBM40 (shaft support blocks)

4 - SSEPBAM40DD (Super Smart pillow blocks)

1 - 32 x 5 Thomson ball screw assembly Y-axis

2 - LSRAM40 CTL x 1200 MM (Smart Rail guides)

4 - SSEPBOAM40DD (Super Smart pillow blocks)

1 - 32 x 5 Thomson ball screw assembly

Benefits

The 60 Case LinearRace shafts and shaft support end blocks provided an important bridge between machining stations. The Super Smart pillow blocks and Thomson ball screws provided uninterrupted high speed movement of the work piece. Productivity increased by 200%

Super Ball Bushing® Bearings

High performance from superior design:

- A coefficient of friction as low as 0.001. This allows the use of smaller, less expensive motors, belts, gears and ball screws when replacing high-friction, plain bearings.
- A self-aligning capability up to 0.5° compensates for inaccuracies in base flatness or carriage machining. Achieved with Thomson Super Bearing plates, which have defined radius crowns for maximized self-alignment accuracy.
- Accelerations as high as 150 m/s² and steady state travel speeds up to 3 m/s without the derating factors commonly required with linear guides.
- Double-lip, integral wipers that keep out dirt while retaining lubrication. Travel life is maximized.
- Lightweight, wear-resistant, engineered polymer retainers and outer sleeves that reduce inertia and noise.
- Adjustable, closed and open configurations.

Quick-to-ship, drop-in replacement parts for existing applications:

- Dimensional interchangeable with competitive and legacy applications.
- Easy to order with local manufacturer's stock available in Europe and North America.

Genuine Thomson Quality:

- Thomson Ball Bushing Bearings in combination with 60 Case® shafting last longer and carry significantly more load than conventional linear bearings, allowing you to reduce component size, saving space and cost. Thomson is the one and only name you'll need when choosing a round rail solution.
- To complete your application with genuine Thomson 60 Case shafting and shaft supports, please visit www.thomsonlinear.com
- Thomson is the innovator of linear bearings and has supplied superior quality product to the linear industry for more than 70 years. Superior Thomson quality translates to better reliability and performance.

Super Pillow Blocks

Thomson pillow blocks with factory-installed Super Metric Ball Bushing® Bearings offer:

- Accelerations as high as 150 m/s² and steady state travel speeds up to 3 m/s without the derating factors commonly required with linear guides.
- Replaceable bearing components for quick, cost-effective machine maintenance and minimal downtime.
- Lightweight, wear-resistant, engineered polymer retainers and outer sleeves that reduce inertia and noise.
- Standard, double-acting, integral seals at both ends, which keep out dirt, grit and other contaminants, retain lubrication, and maximize bearing life.
- Lubrication hole for easy maintenance.
- Tapped or thru hole mounting configuration for ease of installation.
- Twin version with two Super Ball Bushing Bearings, providing twice the load capacity or eight times more travel life than the single version.
- A single bearing version that self aligns in all directions, minimizing installation time and cost.

Note: See page 156 for information on Thomson Super Metric Ball Bushing Bearings.

(1) For rated travel life of 100 km. For longer travel lives, reduce load to $W \cdot (100/L)^{0.33}$ where L (km) is the required travel life. Do not exceed the Dynamic Load Rating for travel life of less than 100 km.

(2) The Load Limit is the maximum load that may be applied to a bearing and shaft. It is important to analyze the application so that peak and/or shock loads do not exceed the Load Limit.

(3) The load capacities W and W_0 are valid for a resultant load applied at 90° with the ball tracks oriented as shown in the polar graphs below. If the resultant acts along another direction, the appropriate multiplicative correction factor K_θ , should be applied to W and W_0 respectively.

(4) For bearing diametral clearances, see Table 2.

(5) SPPBM08 lube hole is M6X1 tapped hole located on opposite side

(6) SPPBM08, SPPBM12 and SPPBM50 pillow blocks have only two mounting holes. The mounting holes on these sizes are marked in the drawing above with “**”

NOTE: For part number description and specifications, see page 157.

NOTE: External seals and retaining rings are available. See page 168 for specifications.

NOTE: For additional technical information, see the Engineering section beginning on page 252.

Accessories

Described here are accessories for Linear Ball Bushing® Bearings and pillow blocks, including retaining rings and external seals.

Metric Ball Bushing Bearings

Retaining Rings

Internal Retaining Rings

Push-in internal retaining rings, as shown, are for use with Metric Ball Bushing® Bearings. Each retaining ring is installed inside the housing bore at each end of the bearing.

(Dimensions in mm)				
Part Number	Use with Ball Bushing Bearing Number	Nominal Shaft Diameter	Nominal Housing Bore A	Minimum End Space required B
PRM08	SPM08 or MAM08	8	16	1.5
PRM12	SPM12 or MAM12	12	22	2.0
PRM16	SSEM16 or MAM16	16	26	2.0
PRM20	SSEM20 or MAM20	20	32	2.0
PRM25	SSEM25 or MAM25	25	40	2.0
PRM30	SSEM30 or MAM30	30	47	2.0
PRM40	SSEM40 or MAM40	40	62	2.5
PRJ16	SSJM16	16	28	2.0
PRJ20	SSJM20	20	32	2.0
PRJ25	SSJM25	25	40	2.0
PRJ30	SSJM30	30	45	2.0
PRJ40	SSJM40	40	60	2.5

External Retaining Rings

External retaining rings are used to form one or two shoulders on the O.D. of the Metric Ball Bushing Bearings.

(Dimensions in mm)				
Part Number	Use with Ball Bushing Bearing Number	Nominal Shaft Diameter	T	Free Diameter D
WRM08	SPM08 or MAM08	8	1.00	14.7
WRM12	SPM12 or MAM12	12	1.20	20.5
WRM16	SSEM16 or MAM16	16	1.20	24.2
WRM20	SSEM20 or MAM20	20	1.50	29.6
WRM25	SSEM25 or MAM25	25	1.75	36.5
WRM30	SSEM30 or MAM30	30	1.75	43.5
WRM40	SSEM40 or MAM40	40	2.00	57.8
WRJ16	SSJM16	16	1.50	27.0
WRJ20	SSJM20	20	1.50	30.0
WRJ25	SSJM25	25	1.75	38.0
WRJ30	SSJM30	30	1.75	43.0
WRJ40	SSJM40	40	2.00	57.0

External Seals

External Seals for Closed Metric Ball Bushing Bearings

Double-acting seals for use in fixed diameter housings.

(Dimensions in mm)				
Part Number	Use with Ball Bushing Bearing Number	Nominal Shaft Diameter	T	Nominal Housing Diameter (1) D
SM08	SPM08 or MAM08	8	3.0	16
SM12	SPM12 or MAM12	12	3.0	22
SM16	SSEM16 or MAM16	16	3.0	26
SM20	SSEM20 or MAM20	20	4.0	32
SM25	SSEM25 or MAM25	25	4.0	40
SM30	SSEM30 or MAM30	30	5.0	47
SM40	SSEM40 or MAM40	40	5.0	62

External Seals for Adjustable Metric Ball Bushing Bearings

Double-acting seals for use in adjustable diameter housings. Series ADJ seals have a radial slot through the circumference to facilitate diameter adjustment.

(Dimensions in mm)				
Part Number	Use with Ball Bushing Bearing Number	Nominal Shaft Diameter	T	Nominal Housing Diameter (1) D
SM08ADJ	SPM08 or MAM08	8	3.0	16
SM12ADJ	SPM12 or MAM12	12	3.0	22
SM16ADJ	SSEM16 or MAM16	16	3.0	26
SM20ADJ	SSEM20 or MAM20	20	4.0	32
SM25ADJ	SSEM25 or MAM25	25	4.0	40
SM30ADJ	SSEM30 or MAM30	30	5.0	47
SM40ADJ	SSEM40 or MAM40	40	5.0	62

External Seals for Open Metric Ball Bushing Bearings

Double-acting seals for use in open type housings.

Part Number	Use with Ball Bushing Bearing Number	Nominal Shaft Diameter	T	Free Diameter D
SM12OPN	SPM12 or MAM12	12	3.20	22
SM16OPN	SSEM16 or MAM16	16	3.20	26
SM20OPN	SSEM20 or MAM20	20	4.20	32
SM25OPN	SSEM25 or MAM25	25	4.20	40
SM30OPN	SSEM30 or MAM30	30	5.15	47
SM40OPN	SSEM40 or MAM40	40	5.15	62

(1) For use in tolerance zones up to H7.

60 Case Product Overview

For more than 70 years, Thomson has been producing precision linear shafting for the Thomson Linear Ball Bushing® and other applications.

- We are one of a few linear motion component suppliers producing their own shafting.
- We offer the largest selection of linear shafting – not just the popular sizes.
- We offer a complete linear motion solution – not just one component of a linear system.
- We offer the widest range of inch and metric shafting, support rails and support blocks in the market today.
- We continually optimize our processes to ensure optimal bearing performance and extended life.
- We perform thousands of hours of laboratory testing per year to continually evaluate our products.

While shafts may appear the same to the untrained eye on the surface, there are significant performance differences due to the manufacturer's selected standards and the manufacturing processes used to achieve them. Thomson 60 Case was developed and is continually enhanced because of our goal to provide a consistent finish, roundness, straightness, cylindricity case hardness and depth on all shafting for the demands of a linear bearing. Unlike common shafting, Thomson 60 Case shafting is manufactured to the highest quality standards in an ISO 9000:2000 registered facility. Our techniques have been continuously upgraded with proprietary knowledge gained from more than 70 years of manufacturing experience. Using Thomson 60 Case with Thomson Ball Bushing Bearings ensures optimal bearing performance and travel life.

Assortment

Thomson 60 Case is available from stock in carbon steel, 440C Stainless Steel, 52100 Tubular, 316 Stainless Steel, carbon steel chrome plated, carbon steel predrilled and 440C Stainless Predrilled from 3/16 to 4". Thomson 60 Case can be mounted or delivered pre-assembled in three configurations: type SR standard support rails, type LSR low-profile support rails and type XSR extra-rigid support rails. Contact Thomson or review the catalog datasheets to see available diameters for the different materials. Thomson has the widest range of materials and diameters available on the market from one source.

Material

Thomson 60 Case carbon steel shafting is made of high-quality, specially developed alloy steel. When it comes to linear shafting, no other manufacturers have set such high standards or specifications for the raw steel used in the production of linear shafting. The chemical properties of the steel are customized to provide consistent, homogenous microstructure and proper response to thermal processing. When you use Thomson 60 Case, you can be confident you get consistent material from shaft to shaft.

Case Hardness

All Thomson 60 Case is induction hardened, and the hardness varies by material type. Thomson 60 Case carbon steel shaft is induction hardened to a 60 Rc min. The Thomson 440C "corrosion resistant" stainless steel shafting is hardened to a 50 Rc min. The 316 Thomson "corrosion proof" stainless steel is not hardened. The Thomson 52100 Tubular shafting is hardened to a 58 Rc min.

Case Depth

The case depth on all Thomson 60 Case shafting is precisely controlled for consistent quality and optimal performance. The extremely hard surface minimizes wear when acting as an inner race of a linear bearing, is resistant to seal lip wear, nicks and scratches for your application needs. The Thomson 60 Case standard case depth is, in some cases, double competitor shafting. This deeper standard case depth provides a stronger, more consistent homogenous microstructure for a linear bearing to run on, leading to an increase in shaft life. For special applications, Thomson offers deep case in carbon steel, where the case depth is two times the normal depth. For specific case depths, refer to catalog datasheets.

Surface Finish

Surface is the key factor affecting travel life, load levels, frictional resistance and smoothness of travel. Thomson 60 Case® shafting is centerless ground for a consistent, smooth and industry leading cataloged surface finish of 8 Ra microinch max. Excellent surface finish and hardness maximize the efficiency and life of linear bearings, shaft riding seals and overall visual appearance. When 8 Ra microinch is not good enough, we can provide 6 Ra microinch surface finishes at an additional cost. Smoother equals longer bearing life.

Roundness

Shaft roundness is vital for linear race applications such as spindles and guide rods where accuracy, life or precision is paramount. Roundness ensures uniform distribution of bearing loads for maximized bearing life, longer travel life and improved positional accuracy. Shafts that look round can be deceiving to the eye and anything but round when properly evaluated, using precision tracing techniques. Thomson 60 Case shaft roundness is within 0.000080" for Class L, S, D, M and .000050" for Class N. Our leading competitors don't catalog roundness and some are .0002". Rounder equals longer bearing life.

These two graphs taken from a roundness trace display the major roundness difference between Thomson 60 Case LinearRace shafting products and competitor shafting.

Straightness

Straightness is the most vital parameter to positioning accuracy for a linear Ball Bushing® system. Thomson 60 Case shafts are straight within 0.001" per foot cumulative (TIR .002") when shipped from the factory. Handling or machining of shafting can cause the material to bend once they leave the factory. When straightness is critical, let Thomson provide the special machined shaft; let us machine and straighten the shaft for you using our proprietary straightening and measurement techniques.

Our leading competitor does not catalog straightness. Straighter equals higher precision.

60 Case LinearRace® shafting is inspected to ensure that it meets the highest quality standards. Standard straightness for all 60 Case LinearRace shafting is .001 inch per foot (.025 mm/300 mm) cumulative (.002 inch [.05 mm] TIR), with special straightness of .0005 inch per foot (.012 mm/300 mm) cumulative (.001 inch [.025 mm] TIR) available.

Cylindricity

Cylindricity is a measure of the degree of conformance of the outside surface (diameter along the length of the shaft) to a true cylinder. True conformance (high cylindricity) ensures the benefits of roundness, diameter and straightness are present over the shaft length, or working surface, and not just in a particular location. This ensures uniform distribution of bearing loads, increases load capacity in the working area of the bearing, maximizes bearing life and increases travel life. Taper is a component of cylindricity and all Thomson 60 Case shafts are produced with a maximum taper of 1/2 the diameter tolerance over the entire length of the shaft.

In linear bearing applications, taper found in competitor shafting can cause one portion of the linear bearing to be loaded higher than the other. This can cause dramatic reduction in travel life or load capacity. As taper increases, balls go in and out of preload causing premature wear and reduction in travel life.

Length Tolerance

Thomson 60 Case shafting can be cut to your specified length. It will have a standard length tolerance of $\pm 1/32"$ for diameters less than 2 inches and $\pm 1/16"$ for all larger diameters. Special length tolerances are available for an additional charge. All cut shafting is subject to a deburring process to remove sharp edges. The size of the standard chamfer is approximately $1/32" \times 45$ degrees for diameters less than 1" and $1/16" \times 45$ degrees for diameters 1" and larger. Special chamfer sizes can be provided for an additional charge.

Predrilled and Tapped Holes

Thomson 60 Case shafting is stocked with radial holes drilled and tapped to accept a continuous shaft support rail in both carbon steel and 440C stainless steel. Continuous support prevents shaft deflection when used to support heavy loads or for long travel lengths.

Precision Special Machining

Thomson 60 Case can be supplied specially machined to your drawing and/or application requirements. Leave your special machining needs to us. With more than 70 years of experience, we can provide a high-quality, special machined shaft to your specifications, allowing you to focus on your core competency. Fax us a detailed sketch or drawing and let our engineers provide you with a quotation. See page 205 for a sample of machining offered.

Special Coatings

Thomson offers a variety of corrosion-resistant products to meet the needs of specific corrosive environments. Thomson 60 Case is available as thin dense chrome plated with plain ends from stock or 100% chrome plated, black oxide, or Armoloy™ plated to name a few. Contact our application engineering team or see page 204 for more information.

How does Thomson 60 Case compare to our leading competitor shafting?

	Thomson	Competitor 1	Competitor 2

60 Case® LinearRace® Shafting for End-Supported Applications

Solid 60 Case LinearRace Shafting Features:

- Diameter range between 3/16 and 4 inch.
- Roundness 80 millionths of an inch.
- Case hardness 60 HRC minimum.
- Surface finish 8 Ra microinch.
- Available in corrosion-resistant 440C stainless steel (50 HRC minimum).
- Available with PrePlate™ chrome option.
- Standard straightness is .001 inch per foot cumulative (.002" TIR) with special straightness at .0005 inch per foot cumulative (.001" TIR) available.

60 Case Tubular Lite™ LinearRace Shafting Features:

- Hollow inner diameter reduces weight and inertia.
- Diameter range between 3/4 and 4 inch.
- Roundness 80 millionths of an inch.
- Case hardness 58 HRC minimum.
- Surface finish 8 Ra microinch.
- Standard straightness is .001 inch per foot cumulative (.002" TIR) with special straightness at .0005 inch per foot cumulative (.001" TIR) available.

60 Case LinearRace Shafting (Predrilled) for Continuously Supported Applications

Solid 60 Case LinearRace Shafting with Mounting Holes Features:

- Radial drilled and tapped holes ready for immediate use with standard hole spacing to match standard 60 Case LinearRace support rails.
- Diameter range between 1/2 and 4 inches, special machining (SM) required over 2 inches.
- Surface finish 8 Ra microinch.
- Hardness 60 HRC minimum.
- Roundness 80 millionths of an inch.
- Available in corrosion-resistant 440C stainless steel (50 HRC min).
- Available with Preplate chrome option.
- Standard straightness .001 inch per foot cumulative (.002" TIR) with special straightness at .0005 inch per foot cumulative (.001" TIR) available.

60 Case Tubular Lite LinearRace Shafting with Mounting Holes Features:

- Hollow design reduces weight and inertia.
- Can be supplied with radial drilled and tapped holes, ready for immediate use.
- Standard hole spacing to match standard 60 Case LinearRace support rails.
- Diameter range between 1 1/2 and 4 inch.
- Roundness 80 millionths of an inch.
- Case hardness 58 HRC minimum.
- Surface finish 8 Ra microinch.
- Standard straightness .001 inch per foot cumulative (.002" TIR) with special straightness at .0005 inch per foot cumulative (.001" TIR) available.

60 Case LinearRace Support Rails and Assemblies

for Continuously Supported Applications

LSR Low Profile 60 Case LinearRace Support Rail Features:

- Diameter range between 1/2 and 4 inch.
- Available with standard mounting holes for immediate use.
- Available without mounting holes for custom hole spacing.
- Low-profile design.
- Unlimited travel lengths.

SR 60 Case LinearRace Support Rail and SRA 60 Case LinearRace Support Rail Assembly Features:

- Diameter range between 1/2 and 2 inch.
- Available with standard mounting holes for immediate use.
- Available without mounting holes for customized hole spacing.
- Available as a pre-engineered, ready to install assembly.
- Lightweight, high-strength aluminum alloy rail.
- Unlimited travel lengths.

LSRA Smart Rail* Assembly Features:

- Diameter range between 5/8 and 1 1/2 inch.
- Bolt-down-from-the-top mounting.
- Single piece lengths up to 15 feet long.
- Low-profile design.

60 Case LinearRace Supports

for End Supported Applications

SB 60 Case LinearRace Shafting End Support Block Features:

- Size range between 1/4 and 2 inch.
- Easily secured with two mounting bolts.
- Malleable iron alloy for sizes 1/2 to 2 inch diameter.
- Protected by corrosion-resistant coating.
- Lightweight, high-strength aluminum alloy construction for sizes 1/4 and 3/8 inch.

ASB Low Profile 60 Case LinearRace Shafting End Support Block Features:

- Size range between 1/4 and 1 1/2 inch.
- Low profile design.
- Easily secured with two mounting bolts.
- Lightweight, high-strength aluminum alloy construction.

FSB Flanged 60 Case LinearRace End Support Block Features:

- Available in 1/2, 3/4, 1 and 1 1/4 inch diameters.
- Flanged mounting surface for easy assembly.
- Easily secured with four mounting bolts.
- Designed specifically for use with Super Smart Flanged pillow blocks.
- Lightweight, high-strength aluminum alloy construction.

Hardened and Ground 60 Case® Precision LinearRace® Shafting

Part Number Description

(1) CTL = Cut to length is Thomson 60 Case cut to your specified length.

(2) RL = Random length is full bar or long length shafting. It is called random length because we start with a raw bar 4" to 6" longer than the min. usable but guarantee only the min. usable. We mark the ends of what is out of our own tolerance. This is the result of the manufacturing process and tightly controlled roundness specifications.

Not all options are available in all sizes.

See catalog pages or contact Thomson Customer Support for combination availability.

For additional information on material options, see page 264.

Look for the Brand Logo

If you specify Thomson, look for the logo. Do not be fooled when ordering linear shafting. All Thomson 60 Case LinearRace shafting is etched with the Thomson logo as shown in the picture. If the shaft you have does not have the logo, it may not be a true Thomson 60 Case. Thomson 60 Case is etched approximately every 18 to 22 inches.

Holes are drilled and tapped to the center of the shaft. Y = distance from end of rail to the center of first mounting hole, Y1 = Y2 unless specified.

Support Rails and Assemblies for Continuously Supported Applications

Part Number Description

Not all options are available in all sizes.

See catalog pages or contact Thomson Customer Support for combination availability.

For additional information on material options, see page 264.

Shaft Rail Supports Type SR & SR-PD

The low-cost way of mounting Thomson 60 Case® shafts

Shaft supports simplify mounting of Thomson 60 Case shafts. Users of Thomson 60 Case shafting should carefully consider the use of these low-cost shaft supports. They are standard, available from stock, and simplify shaft mounting. In addition to other benefits, they eliminate many problems encountered in designing and manufacturing shaft-supporting devices. These versatile mounts can be used horizontally or vertically, and in many different arrangements. Shaft support rails are available without predrilled holes (SR), or predrilled (SR-PD) shaft rails to support 1/2-inch- through 2-inch-diameter shafts are available in standard 24-, 48- and 72-inch lengths⁽¹⁾. Where shorter lengths are needed, rails are easily cut to length. For longer shafts, they can be mounted end to end, using shims or grout, if necessary, to compensate for slight variation within manufacturing tolerance. Thomson offers shaft support rails with pre-drilled holes to simplify shaft mounting.

Low Shaft Support Rails Type LSR & LSR-PD

For compact designs

Low shaft rails allow the design of more compact linear motion systems. The height from the base to the mean shaft center ranges from 9/16 inch for supporting a 1/2-inch-diameter shaft to a maximum 3 1/2 inches when supporting a 4-inch-diameter shaft – 40% lower than standard support rails. Low shaft rails are made of steel to maintain optimum shaft rigidity. Either continuous or intermittent support is possible when using Thomson open-type linear ball bearings. Low shaft rails are furnished in standard 4-foot lengths. Where shorter lengths are required, rails can easily be cut. For supporting longer shafts, rails can be mounted end to end without limit. Low shaft rails are available without pre-drilled mounting holes (LSR) or with predrilled mounting holes (LSR-PD) to match Thomson drilled and tapped shafts (PD). When using LSR-PD, the attachment bolts are underneath, so you must have access under your machine base plate. The LSRA assemblies highlighted below utilize attachment bolts from above. If one of the standard predrilled low shaft rails is not appropriate for your design needs, low shaft rails can be custom drilled by Thomson to your specifications. Send a print with all required dimensions, tolerances and quantities needed to our application engineering team.

⁽¹⁾ Maximum continuous length is 71.94"

Extra-Rigid Shaft Support Rails

For XR Ball Bushing bearing systems

Extra-rigid shaft support rails (XSR) are designed specifically for use with our extra-rigid Series XR Ball Bushing® Bearings. XSR support rails are available in nominal 24-inch lengths and are made of ductile iron and powder epoxy coated to provide the most deflection-resistant shaft support of all Thomson supports. To facilitate quick and easy installation, each extra-rigid shaft support is drilled and counter-bored for securing a drilled and tapped shaft into it and for bolting it to a flat, rigid base. For supporting long shafts, XSR support rails can be mounted end-to-end.

Pre-Assembled Shaft Rail Assemblies Type SRA & LSRA

Thomson 60 Case steel shafts mounted on shaft support rails are now available for instant bolt-down installation. Assemblies are supplied cut to any length with no limit on the overall length (long lengths are butt jointed together unless specified otherwise). Either solid or lightweight tubular shafting can be assembled to the standard Thomson support rails, which come with base mounting holes spaced evenly along the overall length of the assembly. The LSRA uses a special shaft unlike the LSR-PD. The attachment bolts for the LSRA are from the top down so you can easily mount into a machine base plate. The LSRA bolt pattern closely matches profile rail linear guides and can easily be used as a drop-in substitute to replace linear guides (ensure you review loading requirements). Corrosion-resistant lower support rail assemblies (LSRA) are available. The support is zinc plated and shaft is 440C.

Support Rails and Assemblies for Continuously Supported Applications

LSRA24	LSRA24 CR	1.500	1.375	.93	.465	.69	4	3/8	7.37	

(1) Consists of black oxide steel rail and high carbon steel LinearRace shafting (HRC 60 min.).

(2) Consists of zinc plated steel rail and 440C stainless steel LinearRace shafting (HRC 50 min.).

(3) Specify length of assembly when ordering. For example, LSRA12CR x 24.00 inches. Y dimension is equal on each end unless specified by customer.

(4) Assembly weights do not include hardware.

NOTE: LSRA's do not use standard "PD" shafting. The shafting requires a different hole pattern and configuration.

NOTE: Use only with Super Smart open pillow blocks.

**XSRA Extra Rigid Shaft Rail Assemblies** (Dimensions in inches)

Assembly Number	LinearRace Shafting Diameter	Dimensions						Base Holes	Weight lb/ft ⁽¹⁾				
		A $+.000/-0.001$	B	C	D	E	F		Screw Dia.	Hole	C Bore	XSRA	XSRA-TU
XSRA-32	XSRA-32-TU	2	2.750	4 1/2	7/8	1	3 1/8	1/2	9/16	1 x 5/8 DP	4	25.60	21.42
XSRA-48	XSRA-48-TU	3	4.000	6	1 1/4	1 5/16	4 1/4	5/8	11/16	1 1/4 x 3/4 DP	6	53.07	42.38

(1) Assembly weights do not include hardware.

Note: Lengths longer than 24" will use end to end support rails. Y = distance from end of rail to the center of first mounting hole, Y1 = Y2 unless specified.

Support Blocks for End Supported Applications

Part Number Description

ASB 16

Type	Description	Size	Nominal Diameter
ASB	Low Profile 60 Case® LinearRace® End Support Block	4	.250
SB	Standard 60 Case LinearRace End Support Block	6	.375
FSB	Flanged 60 Case LinearRace End Support Block	8	.500
WM	Waymount Support	10	.625
		12	.750
		16	1.000
		20	1.250
		24	1.500
		32	2.000
		48	3.000
		64	4.000

All sizes are not available for all support block types.
See specific product charts for size availability.

Shaft Support Blocks – Type SB and ASB

For end support or intermittent support

Shaft support blocks are used for end or intermittent support where loads are light and deflection between supports is not a problem. Unlike shaft support rails, blocks do not permit longitudinal passage of open-type Ball Bushing® Bearings. Type SB shaft support blocks enable clamping of shafts and eliminate the need for bolts, etc. to maintain shaft position. Shimming is suggested for high-precision applications to eliminate the effect of variations in surface of base or manufacturing tolerances between supports.

Type ASB shaft blocks, manufactured from high-strength, extruded aluminum, provide either end or intermittent support in applications where loads are designed with a reference edge on one side of the base. This provides a surface parallel to the center of the shaft within $\pm .001$ " that can be used to simplify shaft alignment.

Type SB 60 Case LinearRace Shaft End Support Blocks (Dimensions in inches)

Material: Painted Malleable Iron for sizes .5 to 2 in.
Unfinished Aluminum Alloy for sizes .25 and .375 in.

Waymount® Support For adjustable support

Designed for use with RoundWay® bearings. Two or more can be used to provide intermittent support and adjustment along the length of the shaft. Unlike shaft support rails, Waymount supports do not permit longitudinal passage of open-type Ball Bushing® Bearings. When it is necessary to travel over Waymount supports, RoundWay bearings should be used. Open-type Ball Bushing Bearings can be used only if side loads are light and an adapter block is used (consult Thomson Customer Support for recommendation).

In-Between Shaft Sizes: Waymount supports will accommodate all shaft sizes from approximately 3/8" to 6" diameter. Use the Waymount support size nearest to your particular shaft diameter. Favor the next largest Waymount support if the shaft size falls midway between two of them. The mean centering height "H" will vary somewhat with different diameter shafts.

† Please note difference in dimension between shaft centerline of rails, blocks and Waymount supports. Shimming or blocking is suggested when these are used on a single shaft.

Hardened and Ground 60 Case® Precision LinearRace® Shafting

Part Number Description

(1) CTL = Cut to length is Thomson 60 Case cut to your specified length.

(2) RL = Random length is full bar or long length shafting. It is called random length because we start with a raw bar 4" to 6" longer than the minimum usable but guarantee only the minimum visible. We mark the ends of what is out of our own tolerance. This is the result of the manufacturing process and tightly controlled roundness specifications.

Not all options are available in all sizes.

See catalog pages or contact Thomson Customer Support for combination availability.

For additional information on material options, see page 264.

Support Rails and Assemblies for Continuously Supported Applications

Part Number Description

Not all options are available in all sizes.

See catalog pages or contact Thomson Customer Support for combination availability.

For additional information on material options, see page 264.

Shaft Rail Supports Type SRM, SRMTx

The low cost way of mounting Thomson 60 Case shafts

Shaft supports simplify mounting of Thomson 60 Case® shafts. Users of Thomson 60 Case shafting should carefully consider the use of these low-cost shaft supports. They are standard, available from stock, and simplify shaft mounting. In addition to many other benefits, they eliminate many problems encountered in designing and manufacturing shaft-supporting devices. These versatile mounts can be used horizontally or vertically, and in many different arrangements. Shaft support rails are available without predrilled holes (SRM), or predrilled (SRMTx) shaft rails to support 12 mm to 40 mm diameter shafts are available in standard 600 mm where shorter lengths are needed, rails are easily cut to length. For longer shafts, they can be mounted end to end, using shims or grout, if necessary, to compensate for slight variation within manufacturing tolerance. Thomson offers shaft support rails with predrilled holes to simplify shaft mounting.

Low Shaft Support Rails Type LSRM, LSRMTx

For compact designs

Low shaft rails allow the design of more compact linear motion systems. The height from the base to the mean shaft center ranges from 14 mm for supporting a 12 mm diameter shaft to a maximum 39 mm when supporting a 40 mm diameter shaft – 40% lower than standard support rails. Low shaft rails are made of steel to maintain optimum shaft rigidity. Either continuous or intermittent support is possible when using Thomson open-type linear ball bearings. Low shaft rails are furnished in standard 1200 mm lengths. Where shorter lengths are required, rails can easily be cut. For supporting longer shafts, rails can be mounted end-to-end without limit. Low shaft rails are available without predrilled mounting holes (LSRM) or with pre-drilled mounting holes (LSRMTx) to match Thomson drilled and tapped shafts (Tx).

Note: When using LSRMTx, the attachment bolts are from underneath, so you must have access under your machine base plate. The LSRAM assemblies highlighted below utilize attachment bolts from above. If one of the standard predrilled low shaft rails is not appropriate for your design needs, low shaft rails can be custom drilled by Thomson to your specifications. Send a print with all required dimensions, tolerances and quantities needed to our application engineering team.

Pre-Assembled Shaft Rail Assemblies Type SRAM & LSRAM

Thomson 60 Case steel shafts mounted on shaft support rails are now available for instant bolt-down installation. Assemblies are supplied cut to any length with no limit on the overall length (long lengths are butt jointed together unless specified otherwise). Either solid or lightweight tubular shafting can be assembled to the standard Thomson support rails, which come with base mounting holes spaced evenly along the overall length of the assembly. The LSRAM uses a special shaft unlike the LSRMTx. The attachment bolts for the LSRAM are from the top down so you can easily mount into a machine base plate. The LSRAM bolt pattern closely matches profile rail linear guides and can easily be used as a drop-in substitute to replace linear guides (ensure you review loading requirements).

60 Case® LinearRace® Support Rails for Continuously Supported Applications

Type SRM/SRMTx LinearRace Support Rails (Dimensions in mm)

LSRAM40	LSRAM40-CR	LSRAM40-CR	40	36	23.6	11.8	17.5	105	M10	14.27

(1) Consists of black oxide steel rail and high carbon steel LinearRace shafting (HRC 60 min.).

(2) Consists of zinc plated steel rail and 440C stainless steel LinearRace shafting (HRC 50 min.).

(3) Specify length of Smart Rail when ordering. For example, LSRAM20 x 1200 mm. Y dimension is equal on each end unless specified by customer.

(4) Assembly weights do not include hardware.

NOTE: LSRAMs do not use standard "PD" shafting. The shafting requires a different hole pattern and configuration.

NOTE: Use only with Super Smart open pillow blocks.

Support Block for End-Supported Applications

Part Number Description

ASBM 16

Type	Description	Size (mm)
ASBM	Low Profile 60 Case LinearRace End Support Block	8 25
SBM	Standard 60 Case LinearRace End Support Block	12 30
		16 40
		20

Shaft Support Blocks – Type SBM and ASBM

For end support or intermittent support

Shaft support blocks are used for end or intermittent support where loads are light and deflection between supports is not a problem. Unlike shaft support rails, blocks do not permit longitudinal passage of open-type Ball Bushing® Bearings. Type SBM shaft support blocks enable clamping of shafts and eliminate the need for bolts, etc. to maintain shaft position. Shimming is suggested for high-precision applications to eliminate the effect of variations in surface of base or manufacturing tolerances between supports.

Type ASBM shaft blocks, manufactured from high-strength, extruded aluminum, provide either end or intermittent support in applications where loads are designed with a reference edge on one side of the base. This provides a surface parallel to the center of the shaft within $\pm .025$ mm that can be used to simplify shaft alignment.

Type SBM 60 Case LinearRace Shaft End Support Blocks (Dimensions in mm)

Part Number	d	H $\pm .025$	H1	H2	A	A1 $\pm .30$	B	E $\pm .30$	N	Support Block Mass (kg)

Thomson 60 Case® Quick Shaft

"Quick shaft" is precut and packaged stock length shafting in popular:

- Inch and metric sizes
- L tolerance class and MM tolerance class
- Materials (carbon steel, 440C stainless steel, lightweight 52100 tubular)
- Standard options (predrilled and chrome-plated plain ends)

Thomson 60 Case quick shaft can be easily stocked by authorized Thomson distributors or end users.

You may want to have a few pieces of Thomson quick shaft in your stock room if you are not sure of the exact length you may need for that potential third-shift breakdown or you perform your own special machining of various lengths and do not want to carry different cut-to-length sizes.

All Thomson quick shaft shafting are oil preserved and placed in a VCI bag for long-term storage and labeled for your convenience.

Part Number Description

QS SS 1 L PD 24

Not all options are available in all sizes.

See catalog pages or contact Thomson Customer Support for combination availability.

For additional information on material options, see page 264.

Special Machining

For more than 70 years, Thomson has been providing custom special machining on 60 Case® linear shafting. Our skilled machinists can perform a wide variety of special machining operations on the ends or along the length of the 60 Case shaft to provide exactly the part needed for your application.

Standard 60 Case shafting, which is available from stock, can be cut with special length tolerances. 60 Case shafting may also be drilled with a variety of radial holes and tapped if needed. Shafts can be supplied with flats, keyways and reduced diameters. Shafts can also be plated.

There is an extra charge for all special machining operations. For specific prices, send your drawing or technical description to Thomson or utilize a copy of the request for quotation and templates found on pages 206 - 223.

Special Length Tolerances

Standard length tolerance is for $\pm 1/32"$ for shafts less than 2" diameter and $\pm 1/16"$ for 2" diameter and larger. Special length tolerances of $\pm .010"$, $\pm .005"$ and $\pm .002"$ can be achieved on shafts up to 4" in diameter.

Special Straightness Tolerances

Standard straightness is $.001"$ per foot., cumulative (.002" TIR). Special straightness tolerance is $.0005"$ per foot, cumulative (.001" TIR), for all diameters.

Special Chamfer

$1/32" \times 45^\circ$ for diameters less than 1" and $1/16" \times 45^\circ$ for diameters 1" and larger. Special chamfers at any angle can be supplied for an additional charge.

Machining Shaft Ends

For all machining requirements with turned ends, Thomson will anneal the end. The annealing process may cause approximately $1/4"$ to $1/2"$ of heat travel from machined area (depending on major shaft O.D.). Hardness of major shaft diameter near the machined area will be below the Rockwell hardness for the material. If annealing effects are objectionable, alternate machining processes can be used which prevent major diameter softening. Contact Thomson Customer Support for special options. See relevant sections following.

Threaded Shaft Diameter

Standard threads are either Unified National Coarse or Unified National Fine, Class 2-A fit. Shafts will be annealed and soft around the circumference of threaded areas within the case.

Reduced Shaft Diameter

Standard diameter tolerance on turned down diameters is $\pm .001"$. Special tolerance of $\pm .0001"$ is available. Runout is within $.001"$ total indicator reading. Shafts are annealed and soft in turned down sections within case. Two-step shaft diameter reduction is also available.

Radial Holes Drilled and Tapped to Center of Shaft

U.N.C. or U.N.F. Class 2-B thread. Tolerances for hole alignment and location are $\pm 1/64"$, $\pm .010"$ and $\pm .005"$.

Radial Holes Drilled and Tapped thru Shaft

U.N.C. or U.N.F. Class 2-B thread. Alignment and location tolerance $\pm .010"$ shaft annealed and soft around circumference in hole area.

Radial Holes Drilled through Shaft

Alignment and location tolerance $\pm .010"$.

For requests for quotation and ordering custom machined 60 Case LinearRace® shafting, see the convenient templates on pages 206 - 223.

Radial Holes Drilled and Reamed through Shafts

Alignment and location tolerance $\pm .010"$. Hole diameter tolerance $\pm .001"$. Shaft annealed and soft around circumference in hole area.

Radial Holes Drilled through Shaft and Counterbored for Cap Screw

Alignment and location tolerance $\pm .010"$. Tolerance for body diameter and head diameter for American Std. cap screw is $+1/32"$. Shaft remains hard in hole area (not annealed).

Radial Hole Location Tolerance

Unless specified standard location tolerance between holes is $\pm 1/64"$, optional $\pm .010"$ capability exists for all through hole $\pm .005"$ for hole to center.

Coaxial Holes Drilled and Tapped in Center of End of Shaft

U.N.C. or U.N.F. Class 2-B thread. Concentricity $\pm .005"$. Certain diameters and materials will be annealed and remain soft around the circumference. Note: Holes may also be located on a "bolt" circle. Location tolerance is $.010"$.

Retaining Ring Groove

Location tolerances between grooves $\pm 1/64"$ or $\pm .005"$. Tolerance of $\pm .005"$ for maximum ring groove spacing is 96".

Joining Shafts to Obtain Longer Lengths

Threaded and ground joints for 3/4" through 4" and 20mm thru 80mm diameter shaft for lengths up to 20 feet. Dowled joints with concentricity $\pm .010"$ for 1/2" thru 4" and 12mm thru 80mm diameter shaft. The feasibility of butted joints should be considered as possibly the most economical solution before considering either of the previous alternatives.

Butted Joints

Ends machined square, no chamfer. Available for all nominal shaft diameters.

Flats

Flats are available. Flats extending over large portion or entire length of shaft are not available. Cutting into hardened layer would cause considerable warping and subsequent straightening cost is prohibitive.

One Flat on a Shaft

Location tolerance $\pm .015"$.

Multiple Flats on a Shaft

Alignment and location tolerance $\pm .005"$.

Drilled Spot for Set Screws

Location tolerance $\pm 1/64"$. Capability exists for $\pm .002"$. Drill sizes 1/8" thru 3/4".

Keyways

Keyways may be square, flat or American Standard Woodruff. Available for nominal shaft diameters from 1/2" through 4".

For requests for quotation and ordering custom machined 60 Case LinearRace shafting, see the convenient templates on pages 206 - 223.

Example of Our Popular Plating Options

Chrome Plating

The Thomson standard chrome option is pure chrome with a thickness of .00005" - .0001". (Process per AMS 2460, Class 1 (Corrosion Protective Plating), Type II (Satin finish), but with no nickel underlayer.) Other plating options are available for quote, including but not limited to Thin Dense Chrome plating per MIL-S-13165 and MIL-R-81841.

As a result of the plating process and the need to hold parts during plating, coaxial holes may be added as follows:

Up to 1 1/4" diameter shaft any length over 72".

Over 1 1/4" to 2" diameter shaft any length over 48".

Over 2" diameter shaft all lengths.

Note: Our chrome plated with plain ends (CPPE) do not have coaxial holes in any length, but the chamfered edges are not plated.

Black Oxide

The benefits of black oxide is corrosion resistance and black color. The Thomson standard black oxide option meets MIL-DTL-13924D Class 1.

ARMOLOY™

The benefits of Armoloy plating are a 78 RC surface finish, reduction of wear and friction in moving parts, and absolute adhesion to base metal (no chipping, cracking, flaking or peeling will occur). The Armoloy thickness is .0001". Final plated shaft is within specified tolerance class.

As a result of the plating process and the need to hold parts during plating, coaxial holes may be added as follows:

Up to 1 1/4" diameter shaft any length over 66".

Over 1 1/4" all lengths.

Military and industrial specifications satisfied with Armoloy plating are AMS-2438, AMS QQ-C-320 and AMS-2406.

Each supplier used for plating has different capabilities to hold the parts, so requirements for coaxial holes may change over time. These should be used as a rule of thumb with an understanding that longer lengths may have coaxial holes. These holes allow the plater to hold the shaft during the plating process. When a coaxial hole is not used, it means special tooling is available or the ability exists to pinch the part. If coaxial holes are a problem, please contact us and we can work with our supplier to determine what options exist.

Special Machining Quoting

Thomson will be happy to quote any of your special machining needs. In order for us to properly quote the product, we will require an original product drawing or technical description to be sent to our Application Engineering support team at thomson@thomsonlinear.com (email) or 1-540-639-4162 (fax). Our Application Engineering team will contact you if they have any questions, require more information, or a better drawing or sketch. This drawing is important to us to ensure we quote exactly what is required at time of quotation instead of when you place your order. Upon ordering, it is important that you reference the quotation number listed at the top right of the quote and have reviewed the entire quotation, including all the notes associated and exceptions to the line item you are ordering. Quantity quoted and price listed is based on one time manufacturing lot quantity not blanket order unless otherwise stated. Thomson reserves the right to requote if quantity ordered is less than quoted quantity. Upon receipt of order, Thomson assumes you have read and understand the quotation and Thomson will assume no responsibility of exceptions on quotation and failure by customer to read.

Our standard quotations are in the format shown below.

1. Send a copy of your drawing or sketch. If you do not have one, select the Thomson 60 Case LinearRace shaft template that best matches your requirements.
 - A. Fill in all available data with tolerances in either inch or metric units.
 - B. If a feature is not on the template that you are using, add it, and the applicable dimensions.
 - C. If a feature is not required but is on the template, draw a line through the feature, and mark the dimension block with a line or N/A.
 - D. Make any additional notes to the template to aid in quoting and manufacturing.
2. Fax this information with the template drawing to: Quotation Department at 1-540-639-4162.

For any questions or help in determining the best solution to your Thomson 60 Case LinearRace shafting requirements, please contact Application Engineering at:

Phone: 1-540-633-3549

RoundRail Linear Guides

RoundRail Linear Guides	224
End Support 1BA.....	227
End Support 1NA	229
Continuous Support 1CA	232
Continuous Support 1PA.....	234
FluoroNyliner 1VA.....	237
Side Mounted 1DA	240
Dual Shaft Rail 2DA	243
Twin Shaft Web 2CA.....	246
Accessories.....	248

Pre-assembled, ready-to-install stages providing low friction, smooth, accurate motion for a wide range of moment or normal loading configurations. Market applications include factory automation, medical, packaging, machine tool, semiconductor, printing, automotive assembly, aerospace and food processing. Slide tables are available as customizable linear guides to multi-axis, turnkey systems complete with motors, drives, controls and electromechanical accessories.

- Applications typically on factory machinery where accurate, smooth linear positioning is required.
- Available with servo/stepper motor and drive packages.
- Max thrust to 3100 lb.
- Strokes to 120".
- Loads from 5 - 2000 lb.
- Repeatability to 0.0002".

RoundRail linear guides are the non-driven building blocks for linear slide tables. They offer the end user flexibility to fit specific envelopes by allowing customized separations between shafts and between bearings on shafts to produce higher moment capacity. When combined with ball screw assemblies, they become a driven slide table.

Because RoundRail linear guides are offered in a wide range of sizes, bearing types and mounting configurations, they are typically selected by the qualitative attributes that are most appropriate for a given application (i.e. environmental considerations, mounting footprint). For this reason, we are providing the following selection chart and selection criteria for consideration:

Systems Quick Reference Guide

Application Criteria	End Support	Continuous Support	FluoroNyliner	Side Mounted	Dual Shaft Rail	Twin Shaft Web
	1BA / 1NA	1 CA / 1PA	1 VA	1 DA	2DA	2CA

Page Number	231/233	236/238	241	244	247	250

Linear Guide Selection Criteria

- Load/Life
- Travel Accuracy
- Rigidty
- Smoothness of Travel
- Speed & Acceleration
- Envelope
- Environment
- Cost of Product
- Cost of Installation
- Cost of Replacement

Application Examples

- Machine Tools
- Packaging Machinery
- Automotive Assembly Equipment
- Semiconductor Equipment
- Medical Equipment
- Food Processing Equipment

End Support Linear Ball Guides

**Easy to install, smooth operation,
self aligning, high speed**

End Support Linear Ball Guides Offer:

- Increased life within the same envelope. RoundRail linear guides feature the new patented Super Smart Ball Bushing[®] Bearings for up to 216X the life or 6X the load capacity of conventional bearings.
- Cost savings: save time and money preparing your mounting surfaces before bolting down RoundRail linear guides.
- End supported for gantry style or 'bridge' applications.
- The RoundRail Advantage. The inherent self-aligning-in-all-directions design of the Super Smart Ball Bushing Bearing allows for ultra-smooth travel when mounted to wider-toleranced prepared surfaces.
- The Super Smart Ball Bushing Bearing... the most technologically advanced and most robust linear bearing in the world.
- Corrosion-resistant versions for maximum performance in harsh environments.

End Support 1BA

End-Supported, Industry Standard Dimension Inch

Features

- Requires only one part number to specify entire linear guide.
- Available with 60 Case® LinearRace® shaft end support blocks in either lightweight aluminum or rigid iron materials.
- Used to provide increased stability or torque resistance in linear system applications.

Components

- 2 Super Smart Ball Bushing pillow blocks or 1 Super Smart Ball Bushing twin pillow block.
- 1 60 Case LinearRace shaft.
- 2 shaft end support blocks.

Dimensions (Inch)

Type ASB End Support Block

Type SB End Support Block

Type SSUPB Super Smart and SPB Super Ball Bushing Pillow Blocks

Type SSUTWN Super Smart and TWN Super Ball Bushing Twin Pillow Blocks

‡ Sizes .250, .375 and .500 have oil lubricant fitting. Sizes .625 and above have 1/4-28 access for lubrication.

Specifying this Thomson Linear Guide

1. Determine the proper Linear Guide for your load and life requirements.
2. Select the part number.
3. Add the letter "L" followed by the overall length in inches, as a suffix to the part number.

Part Numbering System

End-Support Material: Aluminum Alloy Black Anodized

Material: Iron

End Support 1NA

End-Supported, Industry Standard Dimension Metric

Features

- Requires only one part number to specify entire linear guide.
- Available with 60 Case® LinearRace shaft end support blocks in either lightweight aluminum or rigid iron materials.
- Used to provide increased stability or torque resistance in linear system applications.

Components

- 2 Super Smart Ball Bushing® pillow blocks or 1 Super Smart Ball Bushing twin pillow block.
- 1 60 Case LinearRace shaft.
- 2 shaft end support blocks.

Dimensions (Inch)

Type ASB End Support Block

Type SB End Support Block

Type SPPB Super and SSEPB Super Smart Ball Bushing Pillow Blocks

Type SPTWN Super and SSETWN Super Smart Ball Bushing Twin Pillow Blocks

Specifying this Thomson Linear Guide

1. Determine the proper linear guide for your load and life requirements.
2. Select the part number.
3. Add the letter "L" followed by the overall length in inches, as a suffix to the part number.

Part Numbering System

1NA M12 NMO L600

Supported Linear Guide with 2 Pillow Blocks

Supported Linear Guide with 1 Twin Pillow Block

Maximum Stroke Length is determined by subtracting pillow block length (L2) and 2x support block length (L3) or (L4) from total Linear Guide length (L).

Continuous Support Linear Ball Guides

**High speed, smooth operation,
easy to install**

Continuous Support Linear Ball Guides Offer:

- Increased life within the same envelope. RoundRail linear guides feature the new patented Super Smart Ball Bushing® Bearings for up to 216X the life or 6X the load capacity of conventional bearings.
- Cost savings: save time and money preparing your mounting surfaces before bolting down RoundRail linear guides.
- Superior performance. Continuously supported for maximum down- and side-load applications without concerns for shaft deflection.
- The RoundRail Advantage. The inherent self-aligning-in-all-directions design of the Super Smart Ball Bushing Bearing allows for ultra-smooth travel when mounted to wider-toleranced prepared surfaces.
- Unlimited travel lengths without concerns for machined reference edges or butt joint alignment.
- The Super Smart Ball Bushing Bearing... the most technologically advanced and most robust linear bearing in the world.

Continuous Support 1CA

Fully Supported, Highest Performance, Industry Standard Dimension Inch

Features

- Requires only one part number to specify the entire linear guide.
- Used as a load support, transport and guidance solution.
- Used in continuously supported applications when rigidity is required.

Components

- 2 Super Smart Ball Bushing® open type pillow blocks or 1 Super Smart Ball Bushing open twin pillow blocks.
- 160 Case® LinearRace® shaft support rail assembly.

Specifying this Thomson Linear Guide

1. Determine the proper linear guide for your load and life requirements.
2. Select the part number.
3. Add the letter "L" followed by the overall length in inches, as a suffix to the part number.

LinearRace Shaft Support Rail Material: Aluminum Alloy Grey Anodized

Support rails are supplied in 600mm lengths unless quoted otherwise. Maximum length of LinearRace Shaft Support Rail is 600mm. If longer continuous one-piece

LinearRace Shaft Support Rails are required, contact the Thomson Linear Guides Application Engineering department.

Y = distance from end of rail to the center of first mounting hole, Y1 = Y2 unless specified.

FluoroNyliner® Linear Guides

**Corrosion resistant, smooth, quiet,
industry standard envelope**

FluoroNyliner Linear Guides Offer:

- Thomson FluoroNyliner Bushing® Bearings that are made from the most advanced polymer components to achieve maximum performance levels
- Contamination resistance. The FluoroNyliner linear guides are practically immune to adverse environments, such as water washdown conditions and magnetic interference.
- Self-aligning pillow blocks for ease of use.
- Increased bearing load capacities (or 'PV' ratings) and obtainable travel life when used with Thomson 60 Case® LinearRace® shaft, and when compared to competitive assemblies.
- Specification conformance with FDA and non-lubricated applications.
- Use in linear and rotary motion applications.
- Operates in temperatures from -400 to 550°F (-240 to 287°C).

FluoroNyliner 1VA

Corrosive/Contaminated Environments Inch

Features

- Requires only one part number to specify the entire linear guide.
- Used as a load support, transport and guidance solution.
- Used in continuously supported applications when rigidity is required.

Components

- 2 self-aligning FluoroNyliner Bushing Bearing open pillow blocks or
- 1 self-aligning FluoroNyliner Bushing Bearing open twin pillow block
- 1 stainless steel 60 Case LinearRace shaft support rail assembly

LinearRace® Shaft Support Rail Material: Aluminum Alloy Black Anodized

Support rails are supplied in 24 inch lengths unless quoted otherwise. Maximum length of LinearRace Shaft Support Rail is 72 inches. If longer continuous one-piece LinearRace Shaft Support Rails are required, contact the Thomson Linear Guide Application Engineering department.

Y = distance from end of rail to the center of first mounting hole, Y1 = Y2 unless specified.

Side-Mounted Linear Ball Guides

**Low profile, high loads in all directions,
easy to install**

Side-Mounted Linear Ball Guides Offer:

- Increased life within the same envelope. RoundRail linear guides feature the patented Super Smart Ball Bushing® Bearings for up to 216X the life or 6X the load capacity of conventional bearings.
- Cost savings: save time and money preparing your mounting surfaces before bolting down RoundRail linear guides.
- Side-mounted geometry for increased mounting flexibility.
- Superior performance. Continuously supported for maximum (down- and side-) load applications without concerns for shaft deflection.
- The RoundRail Advantage. The inherent self-aligning-in-all-directions design of the Super Smart Ball Bushing Bearing allows for ultra-smooth travel when mounted to wider-toleranced, prepared surfaces.
- Unlimited travel lengths without concerns for machined reference edges or butt joint alignment.
- The Super Smart Ball Bushing Bearing... the most technologically advanced and robust linear bearing in the world.
- Corrosion-resistant versions for maximum performance in harsh environments.

Side-Mounted 1DA

Side-Mounted for Low-Profile Inch

Features

- Continuously supported design increases rigidity and provides for unlimited linear guide travel lengths.
- Versatile side support rail assembly geometry for optimizing mounting ability.
- Side-mounted design provides an increase in pull-off load capacity.

Components

- 2 Super Smart Ball Bushing® modified open type pillow blocks or 1 Super Smart Ball Bushing modified open type twin pillow block.
- 1 60 Case LinearRace shaft side mounted support rail assembly

(1) For standard lengths LinearRace Shaft Support Rail Material: Aluminum Black Anodized

Support rails are supplied in 24 inch lengths unless quoted otherwise. Maximum length of LinearRace Shaft Support Rail is 72 inches. If longer continuous one-piece LinearRace Shaft Support Rails are required, contact the Thomson Linear Guides Application Engineering department.

Y = distance from end of rail to the center of first mounting hole, Y1 = Y2 unless specified.

Dual Shaft

Low profile, high loads in all directions, easy to install

Dual Shafts Offer:

- This performance proven linear guide has an extremely low profile and features external rails with maximum bearing spacing. This provides the user with high pitch, yaw and roll moment capability. The load capacity is the same when mounted in the inverted position.
- Corrosion-resistant options are also available for demanding environmental conditions. These include chrome-plated or stainless steel shafting and corrosion-resistant bearings.
- The inherent, self-aligning design of the Super Smart Ball Bushing® Bearings allow for more deviation in the flatness of the mounting surface. This can dramatically reduce the installed cost of the linear guide.
- The base extrusion has a reference edge for registration in your machine. Unlimited travel lengths can be realized by combining base and shaft segments. The shafts and bases are staggered to allow keying of the subsequent stage.

Dual Shaft Rail 2DA

with Integrated Carriage Unpack and Install Inch

Features

- Used in continuously supported applications when rigidity is required.
- Adaptable to any drive system.
- Pre-aligned and pre-assembled for immediate installation and use.
- Designed for medium to heavy loads.

Components

- 1 Dual LinearRace® shaft rail assembly
- 1 integrated carriage with 4 open type Super Smart Ball Bushing Bearings

Twin Shaft Web

**High roll moment torque resistance,
high rigidity, smooth, easy to install**

Twin Shaft Web Linear Ball Guides Offer:

- Twin shaft web design for high roll moment capacity, high rigidity and ultra smooth travel.
- Pre-aligned shafts, end supported for gantry style or 'bridge' applications.
- Available in horizontal and vertical orientations for increased mounting flexibility.
- End supported for quicker and easy installation.
- The Super Smart Ball Bushing® Bearing... the most technologically advanced and most robust linear bearing in the world.
- The RoundRail Advantage. The inherent, self-aligning-in-all-directions design of the Super Smart Ball Bushing Bearing allows for ultra-smooth travel when mounted to wider-toleranced prepared surfaces.
- Cost savings: save time and money preparing your mounting surfaces before bolting down RoundRail linear guides.
- Corrosion-resistant versions for maximum performance in harsh environments.

Twin Shaft Web 2CA

with Universal Carriage Unpack and Install Inch

Features

- Used when spanning or bridging a gap.
- Double LinearRace® shaft and welded integral web design maximizes torque and dramatically improves deflection characteristics.
- Pre-aligned for quick and easy installation.
- Designed to move medium loads with virtually frictionless travel.

Components

- Universal integrated carriage with four open-type Super Smart Ball Bushing Bearings.
- Twin welded 60 Case® LinearRace shafts with integral web.
- 2 vertical or horizontal double end supports.

(Horizontal Configuration)

Specifying this Thomson Linear Guide

1. Determine the proper linear guide for your load and life requirements.
2. Select the part number.
3. Add the letter "L" followed by the overall length in inches as a suffix to the part number.

Accessories

We offer a variety of accessories for the Thomson line of RoundRail linear guides.

- * Protective bellows are available on select models for applications where protection of the RoundRail guides and carriage bearings are required within harsh or dirty operating environments.
- * Some linear guide models are available with manually operated locking brakes for vertical applications and operations requiring unlimited carriage position alignment in the available range of stroke.
- * We encourage you to inquire about linear guide accessories not shown here or any custom application needs that you may have.

For a full list of available accessories, including Table Tops, visit www.thomsonlinear.com.

Collapsible Bellows

Bellows will reduce available stroke length of slide by approximately 28%.
Bellows P/N should be succeeded by a length when ordering.

Bellows Materials:

- Polyester Cover
- PVC Stiffeners

BEL-1B (For 1BA) Moveable Protective Bellows (Dimensions in inches)

Part Number	Nominal Shaft Diameter	H	H1	B	CR
BEL1B04	1/4	1.187	.906	1.182	.163
BEL1B06	3/8	1.312	.968	1.937	.108
BEL1B08	1/2	1.687	1.156	2.062	.160
BEL1B12	3/4	2.000	1.156	2.312	.108
BEL1B16	1	2.375	1.281	2.625	.163
BEL1B24	1 1/2	3.062	1.531	3.125	.108

Each moveable bellows comes with 1 section of bellows and 2 pairs of Velcro® fasteners.

BEL-1C (For 1CA) Moveable Protective Bellows (Dimensions in inches)

Part Number	Nominal Shaft Diameter	H	H1	B	CR
BEL1C08	1/2	1.375	.968	2.062	.088
BEL1C12	3/4	1.812	1.062	2.312	.120
BEL1C16	1	2.375	1.218	2.625	.088
BEL1C24	1 1/2	3.125	1.531	3.125	.088

Each moveable bellows comes with 1 section of bellows and 2 pairs of Velcro fasteners.

BEL-2D (For QuickSlide System 2DA) Dual Shaft Rail Bellows (Dimensions in inches)

Part Number	Nominal Shaft Diameter	H	H1	B
BEL2DA08	1/2	1.50	.85	4.60
BEL2DB08	1/2	1.89	1.34	5.13
BEL2D12	3/4	2.406	1.437	6.00
BEL2D16	1	2.875	1.687	7.50

Each moveable bellows comes with 1 section of bellows and 2 mounting brackets and mounting screws (1/2" comes with Velcro fastener). Appropriate arrangements for affixing the bellows at each end of the QuickSlide 2DA System are required.

BEL-2C-H (For Horizontal Twin Shaft Web QuickSlide System 2CA) Moveable Protective Bellows (Dimensions in inches)

Part Number	Nominal Shaft Diameter	H	H1	B	CR
BEL2C08H	1/2	1.688	1.031	3.250	.108
BEL2C12H	3/4	2.062	1.156	3.812	.108
BEL2C16H	1	2.437	1.281	4.62	.108

Each moveable bellows comes with 1 section of bellows and 2 pairs of Velcro fasteners.

BEL-2C-V (For Vertical Twin Shaft Web QuickSlide System 2CA) Dual Shaft Rail Bellows (Dim. in in.)

Part Number	Nominal Shaft Diameter	H	H1	B	CR
BEL2C08V	1/2	2.750	1.000	2.125	.163
BEL2C12V	3/4	3.750	1.125	2.375	.163
BEL2C16V	1	4.375	1.250	2.625	.108

Each moveable bellows comes with 1 section of bellows and 2 pairs of Velcro fasteners.

2DA QuickSlide System with Brake

A manual locking mechanism for the Dual Shaft Rail System

2DA QuickSlide System with Brake offers:

- A manual locking mechanism with infinite positioning capability.
- No carriage mounting surface deflection when the locking mechanism is activated.
- Immediate off-the-shelf availability in 1/2-, 3/4- and 1-inch sizes.
- A locking mechanism that, when activated, will not apply an increase in load on the system's Ball Bushing® Bearing.
- Zero axial movement during the activation of the locking mechanism.
- A fully supported dual shaft assembly for maximum rigidity and unlimited travel.
- High load capacity in any direction.

Dual Shaft Rail Fully Supported System with Integrated Carriage

Dual Shaft Rail Supported Cross-Section

Maximum stroke length is determined by subtracting the carriage length (T1 or T2) plus the brake handle length (J1) from the total system length.

Dual Shaft Rail Fully Supported System with Integrated Carriage (Long Style) (Dimensions in inches)

Performance Criteria

The following performance criteria relates to the use, installation and specification of Thomson Ball Bushing Bearings. Each performance criteria plays an important role in maximizing system effectiveness and life.

Dynamic Load Capacity

The dynamic load capacity of a Ball Bushing Bearing is determined by the reaction between the rolling elements and the inner and outer race. The rolling elements in a Ball Bushing Bearing are a series of hardened and precision ground bearing balls. The inner race is a hardened and precision ground 60 Case LinearRace.

The outer race can be a hardened and precision ground, ball conforming, steel bearing plate or a hardened and precision ground steel bearing sleeve. The dynamic load capacity is also affected by the orientation of the ball tracks, the size of the balls, the shape of the ball conforming groove, the number of balls that are in load contact and more.

Since the introduction of the Ball Bushing Bearing in 1945, Thomson has designed and developed Ball Bushing Bearing products that have continuously achieved dramatic increases in dynamic load capacity and life. Our most recent innovation is the Super Smart Ball Bushing Bearing which has six times the dynamic load capacity or 216 times greater life than the traditional Ball Bushing Bearing.

This increase in load capacity was achieved by maximizing the load reaction between the inner and outer races. This breakthrough in load capacity rivals that of linear guides while still retaining the added benefits of the RoundRail Advantage enabling the linear bearing to avoid many of the derating factors that can diminish the load/life performance of square rail products.

The dynamic load capacity of all Thomson Ball Bushing Bearings is based on a L10 life of two million inches (100 km for metric bearings) of travel. The dynamic load capacity can be affected by the orientation of the bearing with respect to the load or the direction of the applied load. A polar graph is included with each product specification to assist you in optimizing the load capacity as well as the performance of the Ball Bushing Bearing. To determine the resultant load capacity, find the angle at which the load is applied to the bearing and move in radially along that line until it intersects the curve. Move around circumferentially to the polar correction value located on the vertical axis. Next, multiply the proper correction factor by the dynamic load capacity listed in each product specification table.

The RoundRail Advantage

The RoundRail Advantage is the inherent ability of a RoundRail bearing to accommodate torsional misalignment (caused by inaccuracies in carriage or base machining or by machine deflection) with little increase in stress to bearing components (Figure 1). This important feature to all Thomson Ball Bushing® Bearing systems reduces installation time and cost, while maximizing performance.

Ball Bushing Bearing vs. Linear Guide

The major difference between a Ball Bushing Bearing and linear guide system is primarily in the design of the inner race. The linear guide inner race has two, four or six ground grooves that guide the

Figure 1

Figure 2

carriage and the precision balls. Due to the ball-conforming nature of the grooves, the carriage is prevented from accommodating torsional misalignment (Figure 2). If torsional misalignment is introduced to a linear guide system, the component stress increases, reducing life and performance. In a Ball Bushing Bearing system, the inner race is a hardened and ground 60 Case® LinearRace®. Since there are no grooves, the Ball Bushing Bearing system can accommodate torsional misalignment and operate without added stress to bearing components.

60 Case LinearRace/Ball Bushing Bearing Fit-up

There are three basic fit-up conditions of a Ball Bushing Bearing and 60 Case LinearRace: clearance, line-to-line and preload. In most product sections there are specification tables that detail the Ball Bushing Bearing working bore diameter and 60 Case LinearRace diameter tolerance as well as the fit-up between them. The clearance, line-to-line and preload conditions are shown by the abbreviation C for clearance, P for preload and .0000 for a line-to-line condition.

Clearance

The clearance between a Ball Bushing Bearing and a 60 Case LinearRace is a result of the Ball Bushing Bearing working bore diameter and the diameter tolerance of the 60 Case LinearRace. The working bore diameter of a Super Smart or Super Ball Bushing Bearing is a function of the housing bore diameter tolerance. In applications where high accuracy and repeatability is not required, clearance is acceptable. Clearance can be achieved by following the recommended

housing bore guidelines found in the product specification sections. To check for a clearance condition, rotate the 60 Case LinearRace inside the Ball Bushing Bearing while installed in a housing bore. If you can freely rotate the 60 Case LinearRace then a clearance condition is present. For more details see the product specification sections.

Preload

In applications where accuracy and repeatability are critical, the Super Smart, Super and Precision Steel Ball Bushing Bearings can be adjusted to a preload fit-up. The Super Smart and Super Ball Bushing Bearings are inherently adjustable and when installed in an adjustable housing bore a preload condition can be achieved. In a nonadjustable housing a preload condition can be obtained by making the size of the housing bore smaller or by increasing the diameter of the 60 Case LinearRace. To test for a preload condition in an adjustable or nonadjustable housing, simply rotate the 60 Case LinearRace inside the Ball Bushing Bearing while it is installed in the housing bore. If a slight drag is felt then a preload condition is present. When an adjustable housing is used the preload can be altered slightly. The Super Smart and Super Ball Bushing Bearing are more tolerant to preload than the Precision Steel Ball Bushing Bearing. Preload on a Super Smart and Super Ball Bushing Bearing should be a maximum of .001 inch per inch of 60 Case LinearRace diameter. Preload on a Precision Steel Ball Bushing Bearing should be a maximum of .0001 inch per inch of 60 Case LinearRace diameter. When all Ball Bushing Bearings are preloaded, extra care must be taken in mounting the 60 Case LinearRace parallel.

Line-to-Line

A line-to-line fit-up condition between a Ball Bushing Bearing and 60 Case LinearRace is when no clearance or preload is present. A line-to-line fit-up can be achieved in an adjustable or fixed diameter housing. For more details see the product specification sections.

Examples of Ball Bushing Bearing/60 Case LinearRace Fit-ups (in.)

XA203242	1.2500/1.2496	—	1.2500/1.2496	1.2495/1.2490	.0010C/.0001C

The Super Smart Ball Bushing Bearing represents a major advancement in linear bearing technology worldwide. The Super Smart Ball Bushing Bearing offers twice the load capacity or eight times the travel life of the industry standard Super Ball Bushing Bearing. An enormous technological breakthrough, considering the Super Ball Bushing Bearing already offers three times the load capacity or 27 times the travel life of conventional Ball Bushing Bearings.

Technologically Advanced Design

The load carrying component of the Super Smart Ball Bushing Bearing is the combination of four hardened bearing quality steel components (Figures 1 & 2).

The first component is the hardened precision outer ring, which enables the bearing to maintain its diametral fit-up even after extended use, when standard self-aligning bearing plates would imbed into the housing. The unique ring design also allows for bearing adjustment and the removal of diametral clearance. The second component is the precision super finished double track bearing plate that provides twice the load capacity and in combination with the hardened precision steel band provides true universal self-alignment; which means optimum performance even with slight installation imperfections including housing bore out of roundness..

The third component is the rolling element. Each Super Smart Ball Bushing Bearing features precision ground balls manufactured to the highest quality standards for roundness and sphericity. The result is maximum load capacity, travel life and performance.

The last component is the 60 Case LinearRace shaft that functions as the inner race to the Super Smart Ball Bushing Bearing. Each 60 Case LinearRace is manufactured to the highest quality standards for roundness, straightness, surface finish and hardness. Roundness is held under .000080"; straightness to .001" per 12"; surface finish under 8 Ra microinch and hardness of at least 60 HRC. The combination of inner and outer race or 60 Case LinearRace and Super Smart Ball Bushing Bearing provides the fullest embodiment of the RoundRail Advantage.

Self-Alignment

The Super Smart and Super Ball Bushing® Bearings are equipped with a built-in self-alignment feature that allows the bearing to absorb misalignment up to 0.5° per inch (Figure 3 and 4). This self-aligning feature allows the Super Smart and Super Ball Bushing Bearing to absorb misalignment caused by inaccuracies in housing bore alignment or 60 Case® LinearRace® deflection.

Figure 3

Super Ball Bushing Bearing Self-Alignment Feature

This rocking capability also provides smooth entry and exit of the precision balls into and out of the load zone assuring a constant low coefficient of friction. By compensating for misalignment, each bearing ball in the load carrying area is uniformly loaded providing maximum load capacity. Besides this rocking capability, only the Super Smart Ball Bushing Bearing provides two additional self-alignment features. They are Roll and Yaw.

Figure 4

Super Smart Ball Bushing Bearing Self-Alignment Feature

Roll

The Super Smart Ball Bushing Bearing plate is designed with the radius of its outer surface smaller than the inside radius of the precision outer ring (Figure 5). This feature allows the bearing plate to compensate minor torsional misalignment still distribute the load on each of its two ball tracks. The roll component assures maximum load capacity and travel life.

Figure 5

Super Smart Ball Bushing Bearing Self-Alignment Feature

Yaw

The shape formed by the Rock and Roll features enables the Super Smart Ball Bushing Bearing plate to even rotate about its center (Figure 6). This allows the Super Smart Ball Bushing Bearing to also absorb skew caused by misalignment. The result is a constant low coefficient of friction and maximum bearing performance.

Figure 7 below describes the conditions to which Super Smart and Super Ball Bushings automatically self-align. It is important to note that even though the Super Smart and Super Ball Bushing Bearings self-align, they still cannot absorb an out-of-parallel 60 Case LinearRace condition. Tolerance to 60 Case LinearRace out-of-parallelism is a function of clearance between the bearing and its 60 Case LinearRace.

Figure 6

Bearing plates rotate about their center to prevent skewing relative to the 60 Case LinearRace.

Figure 7

Ball Bushing Bearing Life Expectancy and Load Capacity

There are many factors that affect Ball Bushing Bearing travel life such as 60 Case LinearRace hardness, the resultant load, the direction of the resultant load and Ball Bushing Bearing orientation. The dynamic load capacities and travel life graphs given in the specification tables found in each product section are based on a load applied at 90° relative to the horizontal plane with the Ball Bushing Bearing oriented as shown in each corresponding polar graph. Note: For Super Smart Ball Bushing Bearings and other extremely high load bearings, the bearing load capacity as indicated by the polar charts may be practically limited by the degree of shaft flexure acceptable, or the capacity of the shaft rail assembly fasteners. In such cases, the loads should be kept below these practical limits, however, the full corresponding life capacity benefits are still realized! The dynamic load capacity is also based on using only Thomson specified 60 Case LinearRace that is hardened to a minimum of 60 HRC.

For considerations other than those described above, the following formula is used:

$$W_R = \frac{P}{K_0 \cdot K_s \cdot K_L}$$

Where:

W_R = required dynamic load capacity (lb_f or N)

P = resultant of externally applied loads (lb_f or N)

K_0 = factor for direction of resultant load

K_s = shaft hardness factor (Equals 1.0 for 60 Case LinearRace)

K_L = load correction factor

Travel Life

The load correction factor, K_L , can be found from Figure 1 for inch product, and Figure 2 for Metric product. To determine K_L for your required travel life, look for the value on the horizontal axis – Travel Life Factor – left side of the chart. (Interpolate as necessary – this is a Log-Log curve.) That is the value of your load correction factor.

Figure 1

Figure 2

60 Case LinearRace Hardness

For shafts that do not meet 60 Case LinearRace hardness specifications of 60 HRC, shaft hardness factor K_s must be applied. To determine K_s , simply enter Figure 3 with your shaft Rockwell hardness, find the value on the horizontal axis – Shaft Hardness – bottom of chart. Move vertically up until you intersect the curve. Then move horizontally until you reach the vertical axis – Shaft Correction Factor – left side of chart.

Figure 3

Load Direction

In applications where the direction of the applied load is known, refer to the polar graphs on the product specification pages for the orientation factor (load correction factor is K_L). A polar graph is referenced in Figure 4 for example.

Once you have determined your required dynamic load capacity refer to the product specification table for the proper Ball Bushing® Bearing size. Note: For Super Smart Ball Bushing Bearings and other extremely high-load bearings, the bearing load capacity as indicated by the polar charts may be practically limited by the degree of shaft flexure acceptable or the capacity of the shaft rail assembly fasteners. In such cases, the loads should be kept below these practical limits, however, the full corresponding life capacity benefits are still realized.

Note: Thomson Linear Ball Bushing Bearings are precision components.

To preserve bearing warranty, you must use the specified Thomson 60 Case® LinearRace®.

Figure 3

Load Limit

The load limit is the maximum load which can be applied to the bearing. It is important to analyze your application so that peak and shock loading does not exceed the load limit.

Dynamic Load Rating

The dynamic load rating is the maximum continuous load that can be applied to the bearing with a 90% reliability of achieving life of two million inches (100 km for metric bearings) under conventional operating conditions. However, it is important to remember that short strokes and the direction of the applied load can be significant factors.

The following formula may be used to determine travel life for metric bearings (SSEM, SPM, and MAM):

$$L_m = \left(\frac{W}{P} \cdot K_o \cdot K_s \right)^3 \cdot 10^5 m$$

Where: L_m = travel life (m)

W = dynamic load rating from tables (N)

P = resultant from externally applied loads (N)

K_o = factor for direction of resultant load

K_s = shaft hardness factor

Sample Calculations:

Determine the correct Ball Bushing Bearing size for your application. In this example, the bearing/shaft system is subjected to a load of 2300 N perpendicular to the direction of travel. The load is distributed equally among four closed type MultiTrac® Ball Bushing Bearings. The carriage reciprocates over a 0.3 m stroke at a frequency of 100 complete cycles per minute. The minimum service life required is 3500 hours. 60 Case LinearRace shafting is used.

The first step is to determine the average load on each Ball Bushing Bearing.

$$P = \frac{W}{P} = 575 \text{ N}$$

Next, determine the equivalent travel life in meters:

$$\begin{aligned} L_m &= 2 \cdot s \cdot f \cdot L_h \cdot 60 \\ L_m &= 2 \cdot 0.3 \cdot 100 \cdot 3500 \cdot 60 \\ L_m &= 1.26 \cdot 10^7 \text{ m} \end{aligned}$$

Where: s = stroke in meters

f = frequency in cycles per minute

L_h = required life in hours

From Figure 1 (Travel Life Chart), the travel life factor (K_L) is 0.2.

From Figure 2 (Shaft Hardness Chart), the shaft hardness factor (K_s) is 1.

For closed type MultiTrac Ball Bushing Bearings, the minimum value of K_o is 1, the assumed value for this calculation.

The required dynamic load capacity is obtained by using the following formula:

$$W_R = \frac{P}{K_L \cdot K_s \cdot K_o}$$

$$W_R = \frac{575}{0.2 \cdot 1 \cdot 1} = 2875 \text{ N}$$

By referring to the product specification and dimension sections of this catalog, the linear bearing with the next higher load capacity is the MultiTrac MA M40 with a dynamic load capacity of 3820 N.

Determining the Travel Life

The expected travel life of the MultiTrac MA M40 bearing under the conditions described in the example is:

$W = 3820 \text{ N}$ is the rated dynamic load capacity

$P = 575 \text{ N}$ is resultant of external loads

$K_o = 1$ is the orientation factor

$K_s = 1$ is the shaft hardness factor

The values are substituted into the following formula:

$$L_m = \left(\frac{W}{P} \cdot K_o \cdot K_s \right)^3 \cdot 10^5 \text{ m} \quad L_m = \left(\frac{3820}{575} \cdot 1 \cdot 1 \right)^3 \cdot 10^5 \text{ m}$$

$$L_m = 293 \cdot 10^5$$

This is converted into hours by the following:

$$L_h = \frac{L_m}{2 \cdot 60 \cdot s \cdot f} \quad L_h = \frac{293 \cdot 10^5}{2 \cdot 60 \cdot 0.3 \cdot 100}$$

$$L_h = 8139 \text{ h}$$

60 Case LinearRace Shafting Specifications

Thomson 60 Case LinearRace provides the inner race for Thomson Ball Bushing Bearings. All 60 Case LinearRace is manufactured to extremely close tolerances for surface finish, roundness, hardness and straightness to provide long service life with reduced maintenance.

Specifications

Hardness:	HRC 60 minimum
Surface Finish:	8 R_a microinch
Roundness:	80 millionths of an inch
Straightness:	Standard—.001 inch per foot cumulative (.002" TIR) Special—.0005 inch per foot cumulative (.001" TIR)
Length Tolerance:	Standard $+\/- .030$ inch for diameters up to 2 inches $+\/- .060$ inch for diameters 2 inch and over. Special length tolerances available.
Chamfer:	Standard chamfer on diameters up to 1 inch is .030" $\times 45^\circ$ and .060" $\times 45^\circ$ for diameters larger than 1 inch.
Tensile Strength:	Case: 335,000 psi, Core: 100,000 psi
Yield Strength:	Case: 250,000 psi, Core: 75,000 psi

Load Factor

In applications where the applied load exceeds 70% of the maximum dynamic load capacity of Super Smart Ball Bushing Bearings, a high load correction factor K_f must be applied to W_R when calculating travel life. (Figure 1)

Figure 1

Short Stroke Applications

In applications when the stroke length is short, the life of the shaft is shorter than that of the Ball Bushing Bearing. In short stroke applications, the required dynamic load capacity must be multiplied by the factor K_c found on Figure 2.

Figure 2

Load Consideration

When designing a linear motion system, it is necessary to consider how the variables of operation will affect performance.

The following examples demonstrate how the position of the load and the center of gravity can influence the product selection. When evaluating your application, review each of the forces acting on your system and determine the best product for your needs.

Terms:

- d_0 = distance between centerlines of pillow blocks
- d_1 = distance between centerlines of 60 Case® LinearRace® ways (recommended spacing on d_1 is no more than 3x the d_0 distance)
- d_2 = distance from centerline of carriage to load action point
- d_3 = distance from centerline of carriage to load action point
- W = Load (lb)
- F_{NX} = Force in the X-axis direction (lb_f or N)
- F_{NY} = Force in the Y-axis direction (lb_f or N)
- F_{NZ} = Force in the Z-axis direction (lb_f or N)

$$F_{1Z} = \frac{W}{4} + \left(\frac{W}{2} \cdot \frac{d_2}{d_0} \right) - \left(\frac{W}{2} \cdot \frac{d_3}{d_1} \right)$$

$$F_{2Z} = \frac{W}{4} - \left(\frac{W}{2} \cdot \frac{d_2}{d_0} \right) - \left(\frac{W}{2} \cdot \frac{d_3}{d_1} \right)$$

$$F_{3Z} = \frac{W}{4} - \left(\frac{W}{2} \cdot \frac{d_2}{d_0} \right) + \left(\frac{W}{2} \cdot \frac{d_3}{d_1} \right)$$

$$F_{4Z} = \frac{W}{4} + \left(\frac{W}{2} \cdot \frac{d_2}{d_0} \right) + \left(\frac{W}{2} \cdot \frac{d_3}{d_1} \right)$$

Horizontal Application I

At the time of movement with uniform velocity or at the time of stop.

$$F_{1Z} = \frac{W}{4} + \left(\frac{W}{2} \cdot \frac{d_2}{d_0} \right) - \left(\frac{W}{2} \cdot \frac{d_3}{d_1} \right)$$

$$F_{2Z} = \frac{W}{4} - \left(\frac{W}{2} \cdot \frac{d_2}{d_0} \right) - \left(\frac{W}{2} \cdot \frac{d_3}{d_1} \right)$$

$$F_{3Z} = \frac{W}{4} - \left(\frac{W}{2} \cdot \frac{d_2}{d_0} \right) + \left(\frac{W}{2} \cdot \frac{d_3}{d_1} \right)$$

$$F_{4Z} = \frac{W}{4} + \left(\frac{W}{2} \cdot \frac{d_2}{d_0} \right) + \left(\frac{W}{2} \cdot \frac{d_3}{d_1} \right)$$

Horizontal Application II

At the time of movement with uniform velocity or at the time of stop.

$$F_{1Y} \equiv F_{4Y} = \left(\frac{W}{2} \cdot \frac{d_3}{d_1} \right)$$

$$F_{1Z} = F_{4Z} = \frac{W}{4} + \left(\frac{W}{2} \cdot \frac{d_2}{d_0} \right)$$

$$F_{2Z} = F_{3Z} = \frac{W}{4} - \left(\frac{W}{2} \cdot \frac{d_2}{d_0} \right)$$

Side Mounted Application

At the time of movement with uniform velocity or at the time of stop.

$$F_{1X} \equiv F_{4X} = \frac{W}{2} \cdot \frac{d_2}{d_0}$$

$$F_{1Y} \equiv F_{4Y} = \frac{W}{2} \cdot \frac{d_3}{d_0}$$

$$F_{1X} + F_{4X} \equiv F_{2X} + F_{3X}$$

$$F_{1Y} + F_{4Y} \equiv F_{2Y} + F_{3Y}$$

Vertical Application

At the time of movement with uniform velocity or at the time of stop. At the time of start and stop, the load varies because of inertia.

Coefficient of Friction

The coefficient of friction of Thomson Ball Bushing® Bearings ranges from 0.001 to 0.004. There are two components of the coefficient of friction: the rolling or operating friction and the static or breakaway friction.

Coefficient of Rolling Friction

The rolling coefficient of friction is measured by the force required to operate the Ball Bushing at a constant rate of travel. The formula for determining frictional resistance during operation is as follows:

$$P_f = P \times f_r$$

Where,

P_f = Frictional resistance (lb.)

P = Resultant of externally applied loads (lb.)

f_r = Coefficient of rolling friction

The following table describes the coefficient of rolling friction of Ball Bushing Bearings operating on Thomson 60 Case LinearRace. These values are grouped according to the number of ball circuits in each bearing. Friction coefficients are constant among bearings having three and four ball circuits, but slightly less for bearings with five or six ball circuits. A dry Ball Bushing Bearing has the lowest coefficient of friction due to the complete absence of lubricant surface tension effects. Values for grease lubrication ranges from 100% greater in the smaller sizes to 20% to 50% greater in the larger sizes. Oil lubrication (medium/heavy, viscosity 64 cs @ 100°F / 38°C) achieves frictional values slightly higher than those for grease lubrication.

Ball Bushing Bearing coefficients of rolling friction (f_r)

Bearing I.D.	Number of Ball Circuits	Condition of Lubrication	Load in % of Rolling Load Rating (for 2,000,000 inches of travel)				
			125%	100%	75%	50%	25%
1/4, 3/8, 1/2, 5/8	3 & 4	No Lube	.0011	.0011	.0012	.0016	.0025
		Grease Lube	.0019	.0021	.0024	.0029	.0044
		Oil Lube	.0022	.0023	.0027	.0032	.0045
3/4, 1	5	No Lube	.0011	.0011	.0012	.0015	.0022
		Grease Lube	.0018	.0019	.0021	.0024	.0033
		Oil Lube	.0020	.0021	.0023	.0027	.0036
1 1/4 thru 1	6	No Lube	.0011	.0011	.0012	.0014	.0019
		Grease Lube	.0016	.0016	.0017	.0018	.0022
		Oil Lube	.0018	.0018	.0019	.0021	.0027
5/8 thru 1 1/2	10	No Lube	.0011	.0011	.0012	.0013	.0018
		Grease Lube	.0014	.0014	.0015	.0016	.0019
		Oil Lube	.0016	.0016	.0017	.0019	.0025

Coefficient of Static Friction

The coefficient of static or breakaway friction is measured by the force required to initiate Ball Bushing Bearing movement. The formula used to determine static frictional resistance is:

$$P_f = P \times f_0$$

where f_0 = Coefficient of static friction

The values for the coefficient of static friction or breakaway friction are not measurably affected by the number of ball circuits in the bearing or by the lubrication condition.

Ball Bushing Bearing coefficients of static friction (f_0)

Load in % of Rolling Load Rating				
125%	100%	75%	50%	25%
.0028	.0030	.0033	.0036	.0040

Seal Drag

Another variable that affects the frictional resistance in a Ball Bushing Bearing system is seal drag. When seals are used to retain lubricant or to prevent entry of foreign particles, frictional resistance must be taken into account for determining total frictional drag. In applications where contamination is minimal, the seals can be removed to reduce frictional drag. In highly contaminated applications, seals, wipers and or scrapers are used to minimize the ingress of contamination into the bearing. This protective measure adds to the frictional drag of the bearing system. There is a fine line between minimizing frictional drag and maximizing contaminant protection which is controlled by the addition or removal of seals, wipers or scrapers. In applications that require low frictional drag in highly contaminated environments, contact Thomson application engineering.

Thomson can provide a specially formulated lubricant, specifically developed to meet a broad range of linear bearing applications. Thomson LinearLube lubricant is a synthetic lubricant that utilizes suspended Teflon® in a specially formulated compound. LinearLube lubricant provides excellent performance characteristics in a wide range of applications. It is FDA listed, non-polluting and non-corrosive. LinearLube lubricant will not stain and adheres tightly to parts forming a virtually water resistant barrier.

- Maintains properties in operating temperatures from -65°F to 450°F / -54°C to 232°C
- USDA Rated HL (Non-Toxic)
- Will not oxidize in use
- 100% water resistant

System Maintenance and Service

All Thomson Ball Bushing® Bearings require a small amount of grease or oil to operate. For general applications, EP2 (extreme pressure NLGI grade2) lubricant is recommended to prevent wearing and rusting of the bearing surfaces. For food-grade applications, LinearLube (teflon-based synthetic grease) is recommended. When linear speeds are high, light oil should be used and the bearing should be prevented from running dry for a prolonged period of time. A medium to heavy oil or light grease has greater adhesion properties that afford longer bearing protection and minimize sealing problems.

All Thomson Ball Bushing Bearings are shipped with rust preventative oil. It is recommended that you lubricate the Ball Bushing prior to installation and periodically during operation to assure that the Ball Bushing does not run dry. Bearing lube cycle not to exceed 1 year or 100 km of travel (whichever comes first), but more frequent application may be required based on duty cycle, usage, environment and level of contamination. Thomson can provide a specially formulated lubricant, specifically developed to meet a broad range of linear bearing applications. Thomson LinearLube lubricant is a synthetic lubricant that utilizes suspended Teflon® in a specially formulated compound. LinearLube provides excellent performance characteristics in a wide range of applications. It is FDA listed, non-polluting and non-corrosive. LinearLube will not stain and adheres tightly to parts forming a virtually water resistant barrier.

- Maintains properties in operating temperatures from -65°F to 450°F / -54°C to 232°C
- USDA rated HL (Non-Toxic)
- Will not oxidize in use
- 100% water resistant

Bearing Options

Ball Options

- CR Corrosion Resistant: This option is available on all Super and Super Smart Bushing Bearings and pillow blocks. The option provides stainless steel balls and plated bearing plates. For Super Smart, the outer band is also plated. Using stainless steel balls will reduce the dynamic load capacity by 30%.
- SS Stainless Steel: This option is available for metal A Bearings and MultiTrac® metric (MAM) bearings. The option provides stainless steel instead of carbon steel and stainless steel balls. For A Bearings, this is available up to and including 1" sizes. For MAM bearings, this option is available for all sizes except 40mm. Using stainless steel balls will reduce the dynamic load capacity by 30%.
- SP Stainless Steel Balls, Black Oxide Retainer and Sleeve: This option is available for all metal A Bearings and MultiTrac metric (MAM) bearings, and is a good alternative to -SS. Using stainless steel balls will reduce the dynamic load capacity by 30%.
- NB Nylon Balls: This option provides full nylon balls in place of carbon steel balls, resulting in a quiet bearing but reducing the load capacity by 90%. Available on all bearings.
- NBA Alternating Nylon Balls: This option is useful when a more quiet than standard bearing is desired but full nylon is not needed. This will reduce dynamic load capacity by 50%. Available on all bearings.
- OR Outrigger: Only two opposing bearing tracks.

Lube Options

- LL Bearing is lubricated at the factory with Thomson LinearLube.
- L4L Pillow block furnished with a Lube for Life cartridge on each end. This option is available on Super and Super Smart inch pillow blocks, sizes $\frac{1}{2}$ ", $\frac{3}{4}$ ", 1", $1\frac{1}{4}$ " & $1\frac{1}{2}$ ".
- DP Bearing is shipped with no lubricant at all. (Typically all balled bearings are shipped with rust preventative only.)

Other Options

- RP The Roll Pack option eliminates the packing box. This may be desired on larger quantity orders.
- HP The bearing is treated with a black oxide finish. This option is available on metal A Bearings and MultiTrac metric (MAM) bearings.

Note: Up to 1 option per option category can be selected. (Example, A162536-SPLLRLP)

Not all options are available in all sizes.

See catalog pages or contact Thomson Customer Support for combination availability.

Material Engineering Specifications

Ball Bushing® Bearing materials

The following is a tabulation of the materials used for the components of the various types of Ball Bushing Bearings

Type	Outer Sleeve	Ball Retainers	Bearing Plates	Balls	End Rings/Band
SSU, SSJM, SSEM, SPM, SUPER Ball Bushing Bearings	Delrin	Delrin	52100	Chrome Steel	None/Steel
Series A, B, XA, ADJ, OPN and DS	52100	Steel	—	Chrome Steel	Steel
Stainless Steel (SS) to 1" I.D. Series A, XA, ADJ and OPN	440A	Type 305SS	—	440C	Type 303SS
Series MAM	—	Delrin	—	Chrome Steel	Steel
Series INST-SS	440C	Brass	—	440C	None
Series XR	Reinforced Nylon	Reinforced Polyester	8620	Chrome Steel	Steel

Note: Materials called out are typical, certain series and sizes may vary.

Corrosion Resistance

Super and Super Smart Ball Bushing Bearings can be supplied corrosion resistant with hard chrome-plated bearing plates and stainless steel balls. Load capacity will be 70% of regular Super Ball Bushing Bearings. To order, add suffix "CR" following the Super Ball Bushing part number.

Large sizes (over 1" diameter) of series A, XA, ADJ, OPN and B, Ball Bushing Bearings can be supplied with stainless steel balls and black oxide sleeves for limited protection against atmospheric corrosion. Load capacity will be 70% of regular steel bearings. To order, add suffix "SP" following the bearing part number.

Stainless Steel Ball Bushing Bearings

Precision and MultiTrac® Ball Bushing Bearings can be supplied with stainless steel ball and end rings. To order, add suffix "SS" following the bearing part number. Precision bearings are made entirely of stainless steel components. MultiTrac bearings have stainless steel balls, end rings and outer sleeves. Load capacity will be 70% of regular steel bearings.

Sizes available:

Series A and XA: 1/4", 3/8", 1/2", 5/8", 3/4" and 1"

Series ADJ and OPN: 1/2", 5/8", 3/4" and 1"

Series MAM: 8mm (closed type only), 12mm, 16mm, 20mm, 25mm, 30mm

Ball Bushing Bearings with nylon balls

For extremely quiet operation, Ball Bushing Bearings fitted with Nylon balls can be supplied in sizes 1/2" and larger. For estimating purposes, load ratings should be considered about 10% of those listed for Ball Bushing Bearings with steel balls. Prices and other information available on request.

NBA Bearings have a load rating of 50% listed dynamic.

60 Case® shafts – hardened and ground

Material Type	AISI	Rockwell "C"
Solid 60 Case	Bearing-quality, high carbon alloy steel	60 min
Tubular 60 Case	Bearing-quality, high carbon alloy steel	58 min
Solid Stainless Steel	440C Stainless ⁽¹⁾	50 min

(1) For applications using 440C stainless shafting with Thomson Ball Bushing Bearings, contact Thomson Customer Support with full application details for applicable load derating considerations.

Maximum recommended operating temperatures for RoundRail bearings

The following are general recommendations. For additional information or more specific recommendations please contact Thomson Customer Support with full application details.

Type of Ball Bushing Bearings	Maximum Operating Temperature	Load Rating at Maximum Operating Temperature as % of Catalog Load Rating
Series Super Smart, Super, MultiTrac & XR	185°F / 85°C	100%
Series A, B, XA, ADJ & OPN ⁽²⁾ , Series DS, and Series RW S, V, A, B & C	500°F / 260°C	70%
Series A-SS, XA-SS, ADJ-SS, OPN-SS & INST-SS Stainless Steel (through 1" I.D.) ⁽²⁾	600°F / 316°C	60%

(2) Maximum operating temperature for these two series for full catalog load rating is 300°F/149°C.

Note: Type PB-A, PB-ADJ and PBO-OPN pillow blocks are assembled with plastic seal covers with a maximum operating temperature at 185°F. Remove seals and seal covers for use in higher temperatures.

Note: Seals max temperature is 250°F / 121°C.

Note: Shafting loses 5 points hardness for every 100°F / 38°C above 200°F / 93°C.

Note: For extreme minimum temperatures, contact Thomson Customer Support.

Pillow blocks and shaft supports

Part Type	Material
Type Super Smart and Super – Pillow Blocks, Flanged Blocks and Aluminum Shaft Blocks	Type 6061-T6511 Aluminum
Type PB pillow blocks	Ductile Iron
Type PBO & XPBO pillow blocks	Malleable/Ductile Iron
Type SR shaft support rails	Type 6061-T6511 Aluminum
Type LSR shaft support rails	1010 Steel
Type XSR shaft support rails	Ductile Iron
Type SB shaft support blocks	Malleable Iron ⁽³⁾
Waymount shaft supports	Malleable Iron Base with steel adjustment elements

(3)Type 6061-T6511 Aluminum for 1/4" and 3/8" sizes only

RoundRail linear guides

	Components	Material
Supports	Type ASB End Support	Aluminum Alloy ⁽⁴⁾
	Type SB End Support	Iron
	Type SRA End Support	Aluminum Alloy ⁽⁴⁾
	Twin Shaft End Support	Aluminum Alloy ⁽⁴⁾
	Twin Shaft Web End Support	Aluminum Alloy ⁽⁴⁾
	Integrated End Support	Aluminum Alloy ⁽⁴⁾
	Dual Shaft Support Rail	Aluminum Alloy ⁽⁴⁾
Carriage	Inner Race (60 Case Shafting)	Case Hardened High Carbon Steel
	Universal Carriage	Aluminum Alloy ⁽⁴⁾
	Twin Shaft Carriage	Aluminum Alloy ⁽⁴⁾
	Twin Shaft Web Carriage	Aluminum Alloy ⁽⁴⁾
	Modular Dual Shaft Carriage	Aluminum Alloy ⁽⁴⁾
	Integrated Dual Shaft Carriage	Aluminum Alloy ⁽⁴⁾

(4) Custom Black Anodized for inch size systems. Custom Grey Anodized for metric size systems. Custom system lengths may require black paint to protect machine cut-off ends on Dual Shaft Rail Assemblies and Shaft support rails. If a specific surface finish is required contact Thomson Customer Support.

Note: Limited to a Max. Temperature of 185°F / 85°C

60 Case LinearRace® Deflection

When Thomson 60 Case LinearRace is used in an end-supported configuration, it is important to ensure that 60 Case LinearRace deflections at the bearing locations are kept within performance limitations.

These equations give the deflection at the center of an end-supported 60 Case LinearRace. Systems with continuous 60 Case LinearRace support are not subject to the same types of deflection.

For more detailed information of the deflection characteristics of Thomson linear motion products, contact application engineering.

Simply Supported 60 Case LinearRace with One Block

DEFLECTION AT CENTER (D)

$$D = \frac{WL^3}{48 EI} + \frac{5SL^4}{384 EI}$$

Simply Supported 60 Case LinearRace with Two Blocks

$$D = \frac{Wa(3L^2 - 4a^2)}{48 EI} + \frac{5SL^4}{384 EI}$$

LEGEND:

Deflection for Twin Shaft Web System

Since the Twin Shaft Web rail has different stiffness depending on its orientation, an appropriate EI value must be used based upon the direction of loading. Select the orientation of your load from the figure below and then use the appropriate EI value in the deflection equation.

Shaft Diameter (in)	EI Horizontal ($lb_f \cdot in^2$)	EI Vertical ($lb_f \cdot in^2$)
1/2	1.9E+05	3.7E+06
3/4	9.4E+05	1.5E+07
1	3.0E+06	4.7E+07

Ultra Light Aluminum LinearRace® Deflection

Simply Supported 60 Case® LinearRace with One Block

$$D = \frac{WL^3}{48 EI} + \frac{5SL^4}{384 EI}$$

Nominal Diameter (in)	EI (lbf • in ²)
1/4	1.92+03
3/8	9.79+03
1/2	3.13+04
5/8	7.50+04
3/4	1.56+05
1	5.00+05

Simply Supported 60 Case LinearRace with Two Blocks

$$D = \frac{Wa(3L^2 - 4a^2)}{48 EI} + \frac{5SL^4}{384 EI}$$

LEGEND:

- D = (in) (m)
- W = (lb_f) (N)
- L = (in) (m)
- a = (in) (m)
- S = (lb_f/in) (N/m)
- E = (lb/in²) (N/m²)
- I = (in⁴)(m⁴)

How to Cut 60 Case LinearRace Shafts

Genuine 60 Case LinearRace shafting has an extremely hard outer surface, HRC 60 and a soft core. The following steps will guide you in cutting 60 Case shafts. Remember: Always use goggles and normal shop safety precautions.

With an abrasive cut-off saw...
(preferred method)

Step 1:
Mark the shaft at the desired length.

Step 2:
Secure shaft in vise with longer end clamped.

Step 3:
Cut the shaft at the mark.

Step 4:
Chamfer the shaft by rotating it by hand while holding it against an abrasive wheel at approximately 45°. Use an emery cloth to remove burrs and discoloration.

With a lathe...
(using a collect type or standard 3-jaw chuck)

Step 1:
Mark the shaft at the desired length.

Step 2:
Secure shaft in lathe with longer end in spindle.

Step 3:
Use a sharp, carbide cut-off tool with shaft turning at approx. the following speeds: 400 rpm for dia. 1/4" - 1", and 300 rpm for dia. 1" or larger

Step 4:
Chamfer the shaft using a standard carbide turning tool or an abrasive wheel. Use an emery cloth to remove burrs and discoloration.

Application Tips

Two Ball Bushing® Bearings per 60 Case® LinearRace®

When using the Super Smart, Super or Precision Steel Ball Bushing Bearing, it is recommended that two Ball Bushing Bearings be used on each 60 Case LinearRace. This will assure system stability as well optimum performance. If envelope constraints prohibit the use of two Ball Bushing Bearings per 60 Case LinearRace, contact application engineering.

Ball Bushing Bearing Spacing vs. 60 Case LinearRace Spacing

In parallel 60 Case LinearRace applications, the ratio of 60 Case LinearRace spacing to Ball Bushing Bearing spacing should always be less than three to one. This will assure a constant breakaway and operating friction.

60 Case LinearRace Parallelism

In most applications the maximum acceptable out of parallelism condition is .001" over the entire full system length. In applications where preload is present (such as when using Die Set Ball Bushing Bearings), a closer 60 Case LinearRace parallelism is recommended.

Three or More Parallel 60 Case LinearRace Ways

When aligning two 60 Case LinearRace ways parallel great care is required to assure a parallelism within .001" over the entire length of travel. When aligning multiple 60 Case LinearRace ways, parallelism between each 60 Case LinearRace should be held within the .001" specification.

Measuring 60 Case LinearRace Alignment

Methods for establishing or checking 60 Case LinearRace straightness and parallelism depends on the accuracy required. Lasers, collimator or alignment telescopes can be used for very precise applications, while accurate levels, straight edges, micrometers and indicators will suffice for the majority of applications which have less stringent accuracy requirements.

Installation of Super and Precision Steel Adjustable Type Ball Bushing Bearings

When installing a Super Ball Bushing Bearing into a slotted adjustable housing, the bearing plate should not align with the adjustment slot. When installing a Precision Steel Adjustable Type Ball Bushing Bearing into a slotted adjustable housing, the bearing adjustment slot should be 90° to the pillow block adjustment slot. These important steps will assure accurate bearing adjustment.

Access for Lubrication

Thomson Super Smart and Super Ball Bushing Pillow Blocks are equipped with either an oil lubrication fitting or a 1/4-28 access for lubrication. To use the oil fitting simply insert a lubrication device into the oil nipple by depressing the spring loaded ball. The 1/4-28 tapped hole is a standard size for most grease and lubrication fittings. Simply install the lubrication fitting of your choice and it is ready for immediate use. Super Ball Bushing Pillow blocks in sizes .250 through .500 inch diameter are equipped with oil lubrication fittings. Super Ball Bushing pillow blocks in sizes .625 inch and above and all Super Smart Ball Bushing Pillow Blocks are equipped with a 1/4-28 access for lubrication. Metric Super Smart Pillow Blocks are equipped with a M6X1 access for lubrication.

Waymount Support Block for RoundWay® Bearing Installation

Standard Waymount LinearRace Support Blocks provide 60 Case LinearRace adjustment in both the horizontal and vertical direction. This product reduces installation time dramatically, while assuring precise 60 Case LinearRace alignment. This versatile design allows the

Waymount support to be mounted vertically or horizontally and in many different RoundWay bearing applications. The number of Waymounts to be used is based on the maximum allowable 60 Case LinearRace deflection between supports and the accuracy required. Ordinarily indicators, sensitive levels and straight edges are adequate for most alignment conditions.

RoundWay Bearing/60 Case LinearRace Installation Using Grout

Grouting is a very simple method of mounting a 60 Case LinearRace on almost any kind of surface, smooth or uneven. Grouting can also be used in conjunction with standard Waymount LinearRace support blocks or other 60 Case LinearRace supports to obtain maximum rigidity. Dams are fastened to the bed parallel to the 60 Case LinearRace which is then aligned with its mating 60 Case LinearRace (Figure 1). A compound is then poured under and around the lower circumference of the 60 Case LinearRace. This dries quickly forming a solid support of high compressive strength (over 12,000 psi) without affecting the initial straightness of the LinearRace.

If the bearing arrangement permits the grout to flow substantially around the circumference of the 60 Case LinearRace and side loads are light, Waymount LinearRace supports or other hold down bolts along the length made be unnecessary (Figure 2). Just one support at each end of the 60 Case LinearRace will usually provide final alignment and hold the 60 Case Linear-Race in position for grouting. If the length to diameter ratio is large, Waymount LinearRace supports should be equally spaced to minimize 60 Case LinearRace deflection. Grout should always be in direct contact with the surface of the bed or whatever base member provides primary rigidity and support.

Figure 1

Figure 2

Installation Guidelines

Thomson Ball Bushing Bearings are manufactured to exceptionally close tolerances and offer smooth, virtually friction-free motion. The performance features of the bearings will only be realized, however, if care is taken during their installation.

Two areas of primary importance are the bearings alignment and the shaft parallelism. Two bearings are normally used on each shaft to assure smooth operation. The housing should be carefully aligned using the method given below. If a single twin-type housing is used, these procedures are not necessary. It is also necessary to assure that the height from the housing mounting surface to the shaft is consistent within .001". Shimming may be necessary depending on the accuracy of the mounting surfaces to which the housings are bolted.

The housing can be mounted to the plate using the following procedure:

- a. Prepare the carriage plate with one side having an abutting surface.
- b. Mount two housings with the reference edges located against the abutting surface and tighten the hold down bolts. Figure #1
- c. Mount the second pair of housings on the opposite side of the carriage and tighten the bolts finger tight.
- d. Insert a location shaft of correct diameter and tolerance (h6) through these two housings and reference the distance from the abutting surface in [b] above, to this locating shaft. Figure #2
- e. After appropriate alignment of this pair of housings, tighten bolts to secure housings to carriage.

After the carriage is properly prepared, the shafts must be mounted to the surface. To achieve smooth, accurate motion, the shafts must be mounted parallel within .001 inch over the length of the stroke. This can be done by using the following procedure:

- a. Mount one shaft (either end-supported or fully supported) to the surface with mounting bolts finger tight.
- b. Using an aligning device such as a laser, auto-collimator or other optics, sight the shaft straight and secure to mounting surface.
- c. After this first shaft is fixed, the second shaft can be positioned and held down with bolts finger tight.
- d. The carriage is then mounted and its movement will pull this second shaft parallel to the first. Figures #3 and #4
- e. If the second shaft is then secured into position, the procedure is complete. Note that for fully supported systems, this securing should be done when the carriage is close to the bolts. For end supported systems, the securing should be done when the carriage is at the ends of the shafts. Figure #5
- f. An additional check can be done at this time to assure that the carriage is tracking correctly (i.e., that the carriage edge is moving parallel to the shaft). An indicator touching the carriage edge should not vary, as the carriage is moved along the shafts. Figure #6
